

JEFF WEBER RARE BOOKS

CATALOGUE 203: MEDICINE, DRUGS & SOCIETY

Materia Medica & Pharmacology

Selections mostly from the Library of Arthur TELLER, MD

MT1084 [**Acupuncture**]. *Zui xin zhen jiu xue wei gua tu. Zhen jiu xue wei gua tu*. Xianggang: Yi yao wei sheng chu ban she, 1972. ¶ Folio. 87 x 40 cm folded to 40 x 29 cm. 3 color plates. Blue printed wrappers. Very good.
RARE.

\$ 25

"Latest acupuncture points." Issued with an 80-page booklet, not available here. SOLD AS A COLLECTION OF PLATES.

MT1000 [**Al-Kindi**] *Abu Yusef Yaqoub ibn Ishaq Al-Kindi (185-256 AH / 805-873 AD). The Medical Formulary or Aqrabadhin of Al-Kindi;*

Translated with a study of its materia medica by Martin Levey. Madison: University of Wisconsin Press, 1966. ¶ Small 8vo. xiii, [1], 410 pp. Illus., index. Arabic and English text. Dark green cloth, printed dust-jacket; jacket worn. Very good.

\$ 40

The Arabic text is a facsimile of folios 91a-139a of MS. 3603 in the Ayasofya Kutuphanesi, Istanbul. "Levey's fine, scholarly work fills this hiatus in the study of Arabic pharmacy and the evolution of materia medica. In the introduction, Professor Levey adequately covers the major

types of Arabic literature on pharmacology (although the term is poorly defined in the footnote on page 3). He does even better with the etymology and sources of Arabic names in materia medica but gives little attention to the life and times of al-Kindi (see my article, 'Al-Kindi, a ninth-century physician, philosopher, and scholar', *Medical History*, 1965, 9, 328-342).

It is, however, refreshing and very creditable to note that Levey has included a reproduction of the original Arabic manuscript. He has rendered the translation thoughtfully, with good taste and, for the most part, with meticulous accuracy. In several passages, however, words and sentences are incorrectly translated (see for example, Nos. 13, 85, and 216, pp. 42, 100, and 210-212, respectively). A few titles of subdivisions, moreover, have been ignored or overlooked as in No. 95, p. 108, where a new paragraph should read: Dentifrices: 'The white dentifrice used to arrest (cure) . . .' Also No. 99, page 110, should read: 'Another dentifrice for the afore- mentioned ailment . . .' and No. 102, p. 112, should read: The Yahudi's (Jewish) Dentifrice not the 'Jewish Tooth'. This possibly refers to a recipe prepared by Masar-jawayh or another Jewish physician of the eighth or ninth century. The discussion, identification, and arrangement of the materia medica on pages 225-345, together with the selected bibliography, are most welcome and useful additions.

From the wording of the title, the incipit of this treatise, and the repeated references to what al-Kindi 'dictated' (amla), wrote in his own hand, composed, and prescribed (sifat), I am inclined to believe that the treatise is not genuinely al-Kindi's in the true sense of the word. It is rather a formulary or, even better, a selection of remedial recipes a majority of which were gathered from a collection attributed to al-Kindi as his Aqrabadhin. Doubt of its authenticity is further enforced by the fact that it is not listed in al-Nadim's *Fihrist* (completed 987/8), which, to my knowledge, mentions all writings completed by al-Kindi. It is possible that because of the fame of this 'Philosopher of the Arabs', his interest in natural history and medical therapy, and the number of recipes attributed to him, the text bears his name. Further light could be thrown on this matter if the names of pharmacists, physicians, and proprietors, referred to throughout the text, could be adequately identified. I must add that these names are not quoted in full and, hence, authentication becomes a difficult task. Uncertainty by no means minimizes the value of this commendable contribution.

The University of Wisconsin Press deserves to be congratulated on the excellent format, the fine reproduction of the Arabic manuscript, and the beautiful Arabic script included with the materia medica." – SAMI K. HAMARNEH.

M6982 [**American Society for Pharmacology and Experimental Therapeutics**]. **CHEN, K. K.**, editor. *The American Society for Pharmacology and Experimental Therapeutics, Incorporated. The first sixty years, 1908-1969*. (Washington, D.C.: American Society for Pharmacology and Experimental Therapeutics, 1969). ¶ 260 x 185 mm. 4to. viii, 225 pp. Figs., 18 tables, index. Gilt-stamped green cloth. Ownership rubber stamp. Ex library spine number, pocket on rear paste-down. Very good. \$ 20

MRM1080 [**Artelt, Walter & Edith Heischkel-Artelt**] **EULNER, Hans-Heinz** (1925-1980); **Gunter MANN**; **Gert PREISER** (b. 1928); **Rolf WINAU** (1937-2006); **Otto WINKELMANN** (1931-2014) (editors). *Medizingeschichte in unserer Zeit, Festgabe für Edith Heischkel-Artelt und Walter Artelt zum 65. Geburtstag*. Stuttgart: Ferdinand Enke, 1971. ¶ Thick 8vo. xi, [1], 491, [1] pp. 6 plates, illus., index. Green gilt-stamped cloth, dust-jacket; jacket extremities worn, lower corner prominently dented. Inked ownership SIGNATURE OF RICHARD H. SHRYOCK; book store receipt laid in, made out to "Herrn Professor Dr. Richard H. Shryock". Good +. ISBN: 3432016980 \$ 27

Festschrift honoring Edith Heischkel-Artelt (1906-1987) and Walter Artelt (1906-1976), married for a long time, with essays on the history of medicine, themselves both medical historians. Edith Heischkel-Artelt, German physician and medical historian, retired in 1974. Walter Artelt, himself also a German physician, dentist and medical historian. Selected contents: Albert Dietrich, Eine wenig beachtete arabische Übersetzung der Materia medica des Dioskurides; Adalberto Pazzini, Arte e medicina nei secoli XIII e XIV; Joshua O. Leibowitz, Ein volksmedizinisches Buch in jüdisch-deutsch. (I. Teller, Prag, ca. 1650); Rolf Winau, Leibärzte des Grossen Kurfürsten; etc.

PROVENANCE: Richard Harrison Shryock (1893-1972), during his lifetime, was the preeminent historian of medicine in the United States and Europe. On his 75th birthday an entire issue of the journal History of Medicine and Allied Sciences was devoted to his accomplishments. The American Association for the History of Medicine awards the Shryock Medal annually to graduate students in the history of medicine.

MT1001 **BAINÉ, Rodney M.** *The Scattered Portions; William Blake's Biological Symbolism.* Athens: For the Author, 1986. ¶ 8vo. xx, 260 pp. 77 illus., index. Black-stamped red hardcover, dust-jacket; jacket rubbed. Very good. ISBN 10: 0935265104 \$ 7

\$ 14

First edition. "Amphetamines in Clinical Medicine; Features and Practical Usage."

MT1006 **BISHOP, Paul A.** (1896-). *Radiologic Studies of the Gravid Uterus.* New York: Harper & Row, 1965. ¶ Oblong 8vo. xvii, [1], 279, [1] pp. 250 illus., index. Black gilt-stamped cloth. Several ownership signatures of Arthur Teller, MD (incl. title). Very good. \$ 13

MT1007 **BOEMINGHAUS, Hans Karl Werner** (1893-1979). ***Harnableitung in den Darm; Uretero-Sigmoidostomie und Darm- Ersatzblasenbildung.*** Stuttgart: Georg Thieme, 1956. ¶ 8vo. viii, 59, [1] pp. 57 figures. Printed green wrappers. INSCRIBED BY THE AUTHOR. Very good.

\$ 22

On surgery of the intestines. Boeminghaus attended high schools in Duisburg and Oberlahnstein. From 1912 he studied medicine at the Universities of Freiburg, Bonn and Heidelberg. At the outbreak of the First World War, he joined as a volunteer in an artillery regiment. At the end of 1915 he was wounded and dismissed as fit for work after recovery (awarded the Iron Cross II. Class). Since then, Boeminghaus worked as a paramedic, later resident physician in various hospitals and military hospitals. In 1918 he moved back to the front, where he served in changing formations as a field medical officer. In 1919 he passed the state examination and earned his doctorate with the thesis "A case of metastatic purulent iridocyclitis after influenza" to Dr. med. med. In July 1919, Boeminghaus entered the pathological institute Heidelberg as a trainee assistant and in 1920 moved to the Surgical University Hospital Halle as an assistant. In 1924 he habilitated with the thesis "Pharmacological Investigations on the Peripheral Innervation of the Bladder" for the subject of surgery. He gave his inaugural lecture on the history of kidney stone surgery. The Prussian Ministry of Education rejected a lucrative teaching assignment for Boeminghaus for »sports medicine«. In 1929 he moved to the University of Marburg as an associate professor. 1937 Boeminghaus received the post of head of the surgical department in the city hospital Frankfurt

Oder and was taken by the University of Marburg. From January 1939 he set up a urological clinic in the Westend Hospital in Berlin. In June 1939 he habilitated at the University of Berlin and was appointed as an unscheduled professor. During the Second World War he was employed militarily as a consulting surgeon. In 1946 Boeminghaus took over the management of the private clinic Golzheim in Dusseldorf and later belonged to the faculty of the Medical Academy Dusseldorf. In 1966 he retired. Boeminghaus was scientifically one of the leading urologists in Germany, he published numerous papers on urinary tract surgery and wrote several textbooks and teaching letters. Before and after the Second World War he was the editor of the

»Zeitschrift für Urologie«, from 1949 to 1951 president of the German Society for . . . [web-source].

M13454 **BOERHAAVE, Herman** (1668-1738); **François PAUL**; **Gerard VAN SWIETEN** (1700-1772). *Traité des maladies des enfans: traduit du*

Latin des aphorismes de Boerhaave, commentés par M. le Baron de Van Swieten, premier Médecin de Sa Majesté l'Impératrice Reine de Hongrie, &c. &c. &c. . . . par M. Paul. Avignon & Paris: Chez Saillant & Nyon, 1759. ¶ 17 cm. 12mo. xi, [1], 386 pp. Small woodcut title vignette. Original mottled calf, raised bands, gilt-stamped spine, label title label, edges red, marbled endleaves; spine ends worn, upper joint starting. Bookplate and rubber-stamp (on title) of the Surgeon General's Office Library, AFML. Very good.

\$ 295

First French edition. Still tells of how highly regarded Boerhaave was, including to one of his former pupils, Haller. The first printing of the Aphorisms was in 1709. The present work is contained within that work, but this is the material relating to children's health. There were many edition and translations that followed. Still adds, "So important were

the Aphorisms considered that Gerhard Van Swieten of Leyden, who was subsequently the leading physician at Vienna and physician to the Empress Maria Theresa, spent, as Garrison points out, more than thirty years in composing a commentary on them; and a portion of this work, the Aphorisms with his commentary relating specially to diseases of children (*Traité des maladies des enfans*. . . Avignon, 1759)." – Still, p. 327.

The book also contains a materia medica list of treatments for sick children as well as the Appendix. Grulee 589. [FFrye C188]

MT1008 **BÖTTCHER, Helmuth Maxilian** (1895-1979). *Der Mensch stirbt viel zu früh: der Kampf gegen das Altern als Wunschtraum und Wissenschaft*. Köln: Kiepenheuer und Witsch, 1961. ¶ 8vo. 536 pp. Figs., plates, index. Gray cloth, dust-jacket; jacket is heavily worn. Book fine.

\$ 5

"Man dies too soon: the fight against aging as a dream and science."

Second edition, revised and enlarged. Alan Corson Cowperthwaite, MD, PhD, LLD, Professor Materia Medica and Therapeutics, Chicago Homeopathic Medical College, was a member of the American Institute of Homœopathy. This popular textbook went through at least fourteen editions.

M12989 **COXE, John Redman** (1773-1864). "**To the Public**" [with] "**To the Editors of the Pennsylvanian**" by "**a Physician**." Philadelphia: [No publisher given], 1835. ¶ Disbound. 12 pp. Staining to upper text throughout, not affecting legibility. As is. VERY RARE.

\$ 125

This unique publication consists of a brief introduction by Coxe protesting his recent dismissal by the trustees as Chair of Materia Medica and Pharmacy at the University of Pennsylvania, and presenting "to circulate amongst my friends preparatory to the publication of my own statement" this anonymous letter,

originally printed in the Pennsylvanian newspaper, decrying the trustees and offering a defense of Coxe.

Coxe was "one of the founders of the Chemical Society of Philadelphia in 1792 and was later elected a lecturer there and then president. Given Coxe's interest in chemistry, his lucrative medical practice included a drugstore; his 'Coxe's Hive Syrup,' used as an emetic, expectorant and diaphoretic, became a popular syrup for more than fifty years.

"At the time of his 1809 appointment as the chair of chemistry in the University of Pennsylvania Medical School, Coxe gave up his drugstore and resigned from the Chemical Society. Not finding much success as a chemistry professor, Coxe applied for and was elected professor of materia medica and pharmacy in 1818.

Coxe urged the University to offer a master of pharmacy diploma, but Philadelphia pharmacists preferred to avoid control by a medical faculty by establishing their own institution in 1821, the Philadelphia College of Apothecaries (later Philadelphia College of Pharmacy). The Penn medical faculty eventually found the subject of materia medica and pharmacy to be of secondary interest; they also had little respect for Coxe's abilities as a teacher. Thus, in 1835 Coxe lost his professorship at the University of Pennsylvania.

"Coxe made more important contributions as a medical author and editor. The most significant of his many publications were Practical Observations on Vaccination, or Inoculation for the Cow-pock, (1802), and the American Dispensatory, (1806). Coxe edited several journals, including the Philadelphia Medical Museum (1805-1811), and the Emporium of Arts and Sciences (1812-1814). Coxe was also considered an exceptional Greek and Latin scholar. His many intellectual endeavors earned him election to the American Philosophical Society in 1799. He served as Trustee of the University of Pennsylvania from 1806 until his appointment to the medical faculty in 1809" (Penn Biographies).

☀ Penn Biographies, "John Redman Coxe (1773-1864)". University of Pennsylvania University Archives and Records Center. Available on-line. No original printed copies listed on World-Cat.

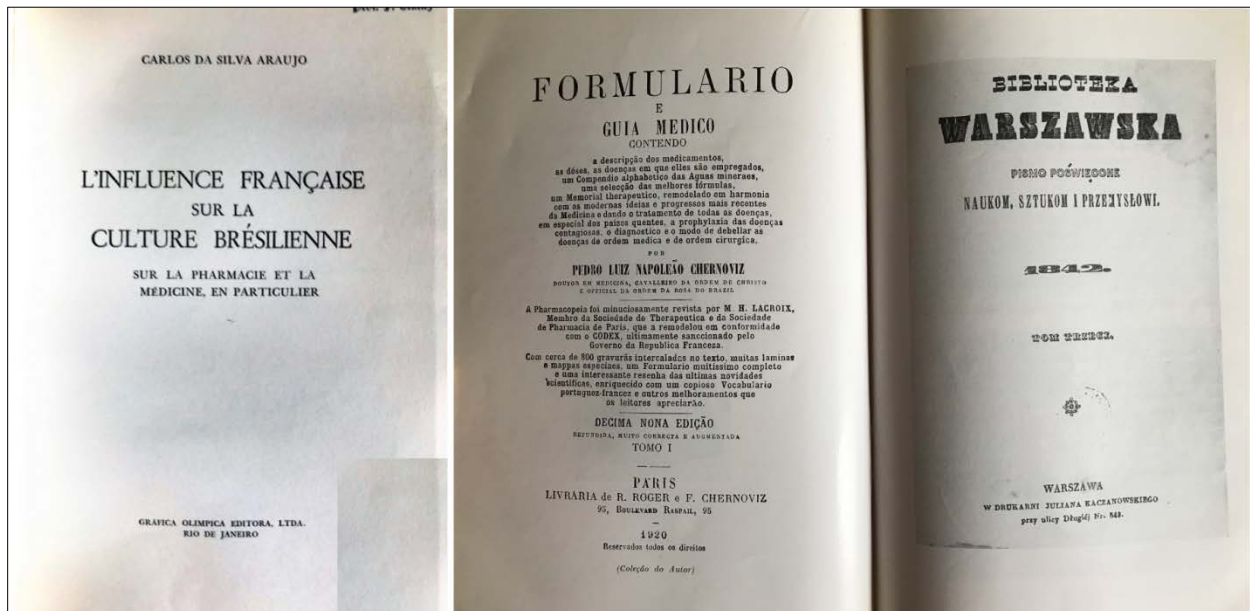

M12327 **CULLEN, William** (1710-1790) & **Benjamin Smith BARTON**. **Professor Cullen's Treatise of the Materia Medica. With large additions, including many new articles, wholly omitted in the original work by Benjamin Smith Barton.** Philadelphia: Edward Parker, 1812. ¶ 2 volumes. 8vo. xxiv, 319; [iv], 424 pp. Index, marbled edges; pastedowns and free end-leaves foxed, light off-setting throughout. Original full tree calf, gilt-stamped spines and red leather spine labels; joints strengthened with kozo, rubbed, Vol. I lacking spine label. Very good.

\$ 250

"Cullen was the most conspicuous figure in the history of the Edinburgh Medical School during the 18th century. He was an inspiring teacher and was instrumental in founding the Glasgow Medical School in 1744. His clinical lectures were notable as being the first given in the vernacular instead of Latin (Garrison & Morton 76 [entry for The Works]).

"Cullen, in his work, did much to advance the standard of medicine by the establishment of a methodical nosology, or an arrangement of diseases, as he expressed it, 'according to their genera and species.' His work in the domain of medicine may be compared to that of his distinguished contemporary, Linnaeus, in systematizing the study of botany and perfecting the classification of plants. He taught that 'the prevention of diseases depended upon the knowledge of their remote causes,' and that 'the cure is chiefly and almost unavoidably founded in the knowledge of their proximate causes. This requires an acquaintance with the institutions of medicine—that is, the knowledge of the structure, action, and functions of the human body, of the several changes which it may undergo, and of the several powers by which it can be changed'" (Staples, p. 691).

M13425 [**Fairfax Family - apothecary**] *Arcana Fairfaxiana Manuscripta. A manuscript volume of Apothecaries' Lore and Housewifery nearly three centuries old, used, and partly written by the Fairfax Family. Reproduced in fac-simile of the handwritings. An introduction by George Weddell.* Newcastle-on-Tyne: Mawson, Swan, & Morgan, 1890. ¶ Sq. 8vo. 206 pp. Facsimiles. Original full brown blind- and gilt-stamped calf an Arabesque decorative central device, on either side of which bears the gilt-stamping of "M-C"; front free endpaper partially clipped. Bookplate of John Oxberry [signed S.O. 1912]. Very good. Scarce.

\$ 150

A collection of early apothecary and household medical remedies reproduced from the original here with an historical introduction. A mounted descriptive printed sheet states: "The greater portion of the volume consists of Medical receipts, with a sprinkling of charms and talismans characteristic of the period. The "Materia Medica," in addition to a whole pharmacopoeia of simples long since discarded in practice, contains numerous gruesome ingredients, etc. The remainder of the book is made up of household receipts for baking and brewing, preserving and churning, bleaching and dyeing after the manner of our remote great grandmothers."

PROVENANCE: "John Oxberry is considered Gateshead's most prominent historian. He dedicated his whole life recording the history of his town. Renowned local historian and member of the Society of Antiquaries, John Oxberry was born at Windy Nook and educated at the Royal Grammar School, Newcastle upon Tyne. As a young man he went out to the gold mines in Otago, New Zealand but failing to make his fortune, he returned to Gateshead. From 1885 –1890 he was School Attendance Officer under the Heworth School Board. After that, until 1917 he was Relieving Officer under the Gateshead Board of Guardians and in 1917 until his retirement in 1930, he was Superintendant Registrar of Gateshead Registration district. In 1937, he was elected an Honorary Freeman of the Borough and presented with a silver casket in the Shipley Art Gallery." – [web source] GatesheadHistory.com

Collation: A-P12, Q10. Pagination: 336, 20, [24] pp. Contemporary vellum, title in old hand on spine; light stain on t.p., pages evenly toned. RARE.

\$ 200

EARLY ITALIAN EDITION, translated by Ludovico Castellini, being a well-known book of secrets.

Fouquet (1590-1681) French scientist, wife of Francis IV Fouquet, daughter of Gilles de Maupeou, and author of several volumes of medical formula written for the poor, and achieved some success. This is an Italian translation of her *Methode que l'on pratique à l'Hôtel des invalides pour guerir les soldats de la verole*, first printed in 1665 (in two parts). This is a separate work, complete in itself, but issued as a third part to her other volumes of "Secreti" or medical formulae. The contents for this work includes "chemistry, pharmacy, materia

medica, the powder of sympathy, treatment of snakebite, toothache, migrane, epilepsy, melancholy, etc." [Neville].

Fouquet wrote of the methods employed at the hospital, the cures applied to soldiers affected by the "French disease" syphilis. Locations: Chemical Heritage Foundation; Harvard University.

See: The Roy G. Neville Historical Chemical Library, Chemical Heritage Foundation, vol. 1, p.465 (1717 edition). Calls this "very rare".

Not in Cushing, Duveen, Edelstein, Ferchl, Ferguson (Book of Secrets), Partington, Smith, Watt, Wellcome; Krivatsy 4233 (1697 issue).

MT1029 **FRIEDE, Reinhard L.** *Topographic Brain Chemistry*. New York: Academic Press, 1966. ¶ 8vo. xiv, 543, [1] pp. Figs., index. Brown cloth stamped in dark brown and gilt, blind-ruled cover. Title with rubberstamp (& elsewhere). Good, but a nice copy.

Chemical and psychological study of popular drugs of the time: mescaline, amphetamines, methylenedioxyamphetamines, asarone, Kava Kava, safrole, LSD, Ololiuqui, adrenochrome, tryptophan, taraxein, the biochemistry. The final section on "Animal studies of hallucinogenic drugs" is by T. Weckowicz.

Osmond coined the term "psychedelic". The two tried to find the medical uses of hallucinogenic drugs, thus the LSD therapy for patients. "Humphry Osmond was at the cutting edge of psychiatric research in the 1950s. He believed that hallucinogenic drugs might be useful in treating mental illness and he studied the effects of LSD on people with alcohol dependency. His investigations led to his association with the novelist Aldous Huxley and to involvement with the CIA and MI6, which were interested in LSD as a possible "truth drug" to make enemy agents reveal secrets.

Was Osmond ahead of his time? His work was cut short by the 1960s drugs backlash, and only now is his work with hallucinogens being looked at with new interest.

Humphry Osmond was born in Surrey in 1917 and graduated from Guy's Hospital Medical School. During the second world war he served in the navy as a ship's psychiatrist. After the war, at St George's Hospital, he and Dr John Smythies learnt of the chemist Albert Hofmann's work with the hallucinogenic drug LSD-25 in Switzerland. They thought schizophrenia might be caused by metabolic aberrations producing symptoms similar to those from drugs such as LSD and mescaline.

“Osmond was interested in a metabolic redefinition of schizophrenia as something like diabetes,” said a former colleague, California psychiatrist Dr Tod Hiro Mikuriya.

LSD-25 had been synthesized by Hofmann in 1938; he discovered its hallucinogenic properties in 1943. One day when he worked with the chemical he felt restless and dizzy and went home. Over the next few hours he experienced fantastic, vivid images with intense colours. He thought he had probably absorbed a small amount of the chemical.

During the 1940s and 1950s both scientists and government intelligence agencies were interested in using hallucinogenic drugs such as mescaline and LSD as a “truth drug”.

Osmond, the scientist, thought the hallucinogens might help treat mental illness. He later wrote, "Schizophrenics are lonely because they cannot let their fellows know what is happening to them and so lose the thread of social support. LSD-25, used as a psychotomimetic, allows us to study these problems of communication from the inside and learn how to devise better methods of helping the sick." Some psychiatrists thought they should take LSD to understand what their patients were experiencing.

The psychiatric establishment was not interested in drugs. In 1951 Osmond moved to Canada, to a bleak institution called the Weyburn Mental Hospital in Saskatchewan, where he had good research funding from the Canadian government and the Rockefeller Foundation and worked with a biochemist colleague, Dr Abram Hoffer. The hospital had many alcoholic patients who had not responded to all previous treatments. Osmond thought that hallucinogenic drugs produced symptoms similar to delirium tremens. Producing a terrifying artificial delirium might frighten an alcoholic into change. Between 1954 and 1960, Osmond and Hoffer treated about 2000 alcoholics under carefully controlled conditions.

They were astonished by what they found. In an interview with the psychiatrist Dr John Halpern, associate director of the substance abuse research programme at Harvard's McClean Hospital, Dr Hoffer recalled, "Many of them didn't have a terrible experience. In fact, they had a rather interesting experience." Osmond and Hoffer reported that 40% to 45% of the alcoholics who were treated with LSD had not returned to drinking after a year.

Osmond sought a name for the effect that LSD has on the mind, consulting the novelist Aldous Huxley who was interested in these drugs. Osmond and Huxley had become friends and Osmond gave him mescaline in 1953. Huxley suggested "phanerothyme," from the Greek words for "to show" and "spirit," and sent a rhyme: "To make this mundane world sublime, Take half a gram of phanerothyme." Instead, Osmond chose "psychedelic," from the Greek words psyche (for mind or soul) and deloun (for show), and suggested, "To fathom Hell or soar angelic/Just take a pinch of psychedelic." He announced it at the New York Academy of Sciences meeting in 1957.

But the climate was changing in the cultural and political turmoil of the Swinging Sixties. The use of marijuana and other recreational drugs among young people was thought to be a cause of social unrest, environmental

protests, women's lib, civil rights marches, and protests against the Vietnam war. "The money dried up," said Dr Halpern, and new laws restricted researchers' ability to study the drugs. "Osmond was at the cutting edge of psychiatric research at the time. It was a tragedy his work was shut down because of the culture," said Dr Charles Grob, professor of psychiatry at the University of California School of Medicine-Los Angeles (UCLA).

Osmond moved to head the Bureau of Research in Neurology and Psychiatry at the New Jersey Psychiatric Institute in Princeton. His colleague Dr Mikuriya, later in charge of marijuana research at the National Institute of Mental Health, was puzzled that Osmond and his colleagues had psychedelic drugs available in their offices when local police had undercover agents searching for drug users. He found the answer 20 years later when the book *Acid Dreams* revealed Osmond's CIA and MI6 connections."

M13467 **HOME, Francis** (1719-1813). *Medical facts and experiments*.

London: Printed for A. Millar; and Edinburgh: A. Kincaid and J. Bell, 1759.

¶ 16 cm. 8vo. viii, 288 pp. Mild foxing. Original full tree calf, gilt-stamped red title label; joints broken, extremities worn. inscribed: John Tetsworth to Jonathan Havesy[?]. Good +.

\$ 395

FIRST EDITION, arranged in three parts: Epidemics, Cases, Experiments. Of epidemics the author describes various fevers of 1742, 1743 and 1748, epidemic lumbago, mortification, small-pox, "glanders", and gun-shot wounds. His case reports are arranged by subject: pulse, gout, swelling, fever, dysentery, cough, asthma, stone in the ureter, suppuration of the kidney, consumption, inflammation of the testicle, concussion (fall on the head), skull fracture, inflammation of the brain, and various fevers. He offers four experiments: velocity of the blood..., nitrum murale, perspiration at Edinburgh, attempts to inoculate against measles. Home was the first to experiment on immunizing against measles. [Parrish]. "So far as known, the first attempt to inoculate man with measles was made by Francis Home in Edinburgh in 1758. . . ." – Ludvig Hektoen.

"Experimental human transmission of measles," pages 266-288. Garrison and Morton 5442. Francis Home, M. D., Scottish physician, the first Professor of Materia Medica at the University of Edinburgh, one of the founders of the Royal Society of Edinburgh, elected a Fellow of the Royal College of Physicians in Edinburgh.

M12366 **HOME, Francis** (1719-1813). *Clinical Experiments, Histories, and Dissections*. London: J. Murray, 1682 [i.e. 1782]. ¶ Second edition. 8vo. xii, 499, [1 blank], [ads 8] pp. Toned, rear end-leaves water-stained. Later full-grain calf, gilt-stamped black leather spine label; binding worn, outer hinges reinforced with Kozo, spine missing small pieces. Date incorrectly printed on title-page as DCLXXXII—37 years before Home was born—erroneously omitting a "C," as the book was actually published in 1782. Inscription from "John Tetsworth [?] to Jonathan Havesy [?]" Good.

\$ 650

This work was published after years of observation by Homes at the Royal Infirmary at Edinburgh. "Besides containing accurate histories of the cases of particular patients, a distinct view of the treatment in each, and the principle observations which were delivered in lecture, it exhibits also a faithful account of trials which have been made with the greatest part of the new remedies lately introduced into practice; and a minute detail of the effects which have been observed to result from them" (Medical and Philosophical, p. 463).

Home, who served with the British army in Flanders, studied medicine at Leyden before graduating with his degree at Edinburgh in 1850. After joining the College of Physicians and producing several works, he was appointed to Chair of the Materia Medica at Edinburgh, following his professorship in that department. As chair, he followed William Cullen "into speculations and beyond what the state of knowledge at the time had justified, but he also 'fully considered the physical characters and mode of administration drugs' which Cullen had omitted" (Grant, p. 424). Home was ultimately "made a Clinical Professor of Medicine, and in 1780 he brought out Clinical Experiments, Histories, and Dissections, in which work he related the effects produced by many new remedies tried by him in the Infirmary. He thus contributed to the advance of Therapeutics" (Grant, p. 424). Upon his retirement from Edinburgh, he chose his son, James Home (1798-1821) as his successor, 'whose great success as a teacher raised the Chair of Materia Medica to a height of prosperity which has never been surpassed. . . ." (Grant, p. 424). Grant, Alexander. *The Story of the University of Edinburgh During Its First Three Hundred Years*. Vol. 2. London: Longmans, Green, 1884; *Society of Physicians in Edinburgh, and First Medical Society of Edinburgh. Medical and Philosophical Commentaries*. Vol. 6. London: J. Murray, 1779; Welcome 11276942.

M13468 **HOOPER, Robert** (1773-1835). ***Lexicon-medicum: or medical dictionary: containing an explanation of the terms in anatomy, physiology, practice of physic, materia medica, chemistry, pharmacy, surgery, midwifery, Second American, from the fourth London edition***. New York: Published by E. Duyckinck, E. Bliss & E. White, Collins & Hannay, Collins & Co. and James V. Seaman, 1824. ¶ 23 cm. 952 pp. Title-page signed: D. Sheldon. Original full calf, raised bands, gilt-stamped leather spine label; upper cover reattached with kozo strip applied to upper joint, rubbed. Bookplate of Charles Atwood Kofoid. Very good.

\$ 75

One of the most popular medical dictionaries of its day, it also represents well the attitudes towards medicine and applied vocabularies. One example is dealt with in Kotar and Gessler who point out the attitude of the church with regards to small pox (variola): "Hooper erred, as men of the day denounced the vaccine on religious grounds, stating they would not be treated 'with substances originating from God's lowlier creatures.'" – S.L. Kotar, J.E. Gessler, *Smallpox, a history*, pp. 51-2.

Hooper, Robert (1773–1835), "medical writer, son of John Hooper of Marylebone, was born in London in 1773, and after a course of medical study in London was appointed apothecary to the Marylebone workhouse infirmary. He entered at Pembroke College, Oxford, on 24 Oct. 1796, graduated B.A. in 1803, M.A. and M.B. in 1804. Some difficulty (instigated, it is said, by members of the College of Physicians) prevented his proceeding to M.D. at Oxford, but he was created M.D. of St. Andrews on 16 Dec. 1805, and admitted licentiate of the Royal College of Physicians on 23 Dec. 1805. Settling in Savile Row, he lectured there on the practice of medicine for many years to large classes. He made a special study of pathology, and formed a large collection of illustrative

specimens. While carrying on an extensive practice, he was a most industrious writer, and his books had a large sale. Revised editions of several of them continue in sale. He retired from practice in 1829, having made a fortune, and lived at Stanmore. He died in Bentinck Street, Manchester Square, on 6 May 1835, in his sixty-third year." – *DNB*.

Mayrhofer Bernhard, physician and medical historian, born in Mürzzuschlag (Styrian), 1868; died in Innsbruck, 1938. Studied medicine 1886-91 at the Universities of Vienna and Heidelberg, taking his degree in 1892; he worked until 1898 as a doctor in Mauerkirchen (Upper Austria), then received training as a dentist at Scheff and Weiser in Vienna and opened in 1899 a practice in Linz. Mayrhofer published a series of substantial medical works that considerably promoted the development of his subject. In 1905 he was appointed Professor of Dentistry at the Univ. Innsbruck, 1914-18. Dean of Medical Faculty, 1926, Prof., 1930/31, Dean and 1932/33 Rector. Mayrhofer has entrusted with the establishment of the then newly founded Institute a modern dental clinic. This was the first and then only dental clinic in Austria. He was an excellent teacher, putting a lot of effort into his work at the University of Innsbruck, including the first recorded medical-history lectures.

BL3124 **LIEBIG, Justus von. *Reden und Abhandlungen***. Wiesbaden: Dr. Martine Sandig oHG, (1965). ¶ Facsimile of 1874 printing. 8vo. viii, 334 pp. Gilt-stamped blue cloth; head slightly bumped. Burndy bookplate. Very good+.

\$ 25

Liebig (1803-1873) a leading figure in chemistry, made fundamental contributions in chemistry (organic chemistry), and its application to the fields of pharmacology, agriculture, and sanitation, etc. In 1840 he was awarded the Royal Society Copley Medal. The present work is a collection of seventeen papers originally published between 1838 and 1871. Includes three papers by Liebig on Francis Bacon. See: Sonntag, O., "Liebig on Francis Bacon and the utility of science," *Annals of Science*. 31 (5): 373-86, 1974. "Justus von Liebig (1803-1873) strongly censured Bacon's learning method and his natural philosophy. Obviously, Liebig ignored the context of science in the 17th century, and even worse, the poor status of chemistry within natural philosophy." – Pedro Cintas, "Francis Bacon: An Alchemical Odyssey through the Novum Organum," *Bull. Hist. Chem.*, vol. 28, 2, 2003.

Lloyd (rear), J.W. Mackasey (p.218)]. Good working copy. \$ 130

One of two competing "First Revisions" of the historic 1820 Pharmacopeia of the United States (the other revision was published in New York in 1830). "...in the Philadelphia contingent were two physicians whose competent work and influential personalities would be decisive for the future of the Pharmacopeia of the United States: George B. Wood and Franklin Bache. Among medical practitioners in general, now that the Pharmacopeia seemed to be well established, interest in it waned. So much so that it is doubtful that

pharmacopeial work would have persisted except for the prosperity of the United States Dispensatory prepared by Wood and Bache (see p. 279), who were now the key figures in carrying forward the further revision of the Pharmacopeia." – Kremer and Urdang, *History of Pharmacy*.

Offers a lot of interesting recipes and tinctures for medical needs. Opium is offered, ointments of various types, medicated wines, syrups, spirits, powders, pills, morphia, preparations of honey, liniments, infusa, applications of mercury, iron, copper or zinc, extracts, plasters, decoctions, confections, lime (solution of muriate of lime), prepared oyster-shell, arsenic, medicated waters, ammonia, alcohol, ethers, acids, vinegars, etc.

"The want of a National Pharmacopoeia had long been felt in this country as a serious evil, before any attempt was made to supply the deficiency" [Preface].

There was a lack of cooperation between various fragmented medical interest groups throughout the US in the period before 1820. In 1818 Dr. Lyman Spalding proposed a National Pharmacopeia. By setting up four separate districts, and holding a general convention, progress was made. The first national pharmacopeia was thus issued in 1820 and this 1831 represented a furtherance of that effort.

MT1054 **NAVRATIL, Leo** (1921-2006). **Über Schizophrenie und Federzeichnungen des Patienten O.T.** München: Deutscher Taschenbuch Verlag, 1974. ¶ Small 8vo. 301, [1], [2] pp. Numerous drawings; some leaves ruffled at corner. Black printed wrappers. Ownership name of Arthur Teller, MD. Good.

\$ 5

Navratil, an Austrian psychiatrist, who developed the idea that patients in an acute stage of schizophrenia can make art that is useful for assisting in the understanding of their condition. The most famous of these artist/patients is Oswald Tschirtner, also known as O.T. (1920-2007). In 1957, he was sent to the Klosterneuburg Hospital near Vienna, and it was there that he began to draw, albeit reluctantly, under the supervision of Leo Navratil and other hospital staff. He displayed a unique approach to his works through his selective use of line and detail. His figures, particularly in his drawings from the 1980s onwards, are extremely reductive, and he arrives at the essential essence of portrayal through the conveyance of a minimal amount of visual detail. Tschirtner lived at the Haus der Künstler (House of Artists) since its opening in 1981. Located on the grounds of the Klosterneuburg Hospital in Maria-Gugging, Austria, this is a domicile where patients who show significant artistic talent live very independently and focus on their creative work. - Wikip.

Schneider completed an internship as a pharmacist (Fichtenberg pharmacy in Berlin) and studied pharmacy in Berlin with the pharmaceutical state examination in 1935, the Chemists Association examination in 1936 and the doctorate with Carl Mannich in 1938. From 1948 he was assistant at the Institute of Pharmaceutical Chemistry of TH Braunschweig, where he habilitated in 1954. In 1958 he founded the Seminar for Pharmacy in Braunschweig, where he became an associate professor in 1960. In 1977 he was retired, but remained active at the seminar. His successor was Erika Hickel (* 1934). He focused in particular on the history of medicines, experimentally researching the formulas of old medicines. He also dealt with Paracelsus and his school. He is best known for his Lexicon of Drug History and his History of Pharmaceutical Chemistry (1972). (web-source).

\$ 350

INAUGURAL DISSERTATION by Robert Smith on the remission of infantile fevers. This dissertation was directed by George Baird, Præfect of the Edinburgh Academy, who directed a number of other inaugural dissertations in the 1800s; other members of the committee were Matthew Baillie (1761-1823) author of *Morbid anatomy of some of the most important parts of the human body* and physician extraordinary to George III, and James Home (1760-1844) Professor of materia medica at Edinburgh and professor of medicine. Inscribed by the author to another member of the dissertation committee, Jacob Home, Professor of Materia Medica, Edinburgh Academy. Monk's Roll (III, p. 166) records one Robert Smith, M.D. as the son of the Rev. G. Smith. This Robert was "bred a surgeon, and for some years practiced as such in the country. Having been created doctor of medicine (I believe by the University of Aberdeen), and on the 13th May, 1817, admitted an Extra-Licentiate of the College of Physicians, he settled as a physician at Maidstone, where he practiced with much reputation and success, and died on the 29th June, 1833." It is not possible to make a conclusive identification, but the dates are indeed intriguing.

Otmar Freiherr von Verschuer (16 July 1896 – 8 August 1969) was a German human biologist and geneticist, who was the Professor of Human Genetics at the University of Münster until his 1965 retirement. He was regarded as a pioneer in the twin methodology in genetics research and in the study of the inheritance of diseases and anomalies, and was a prominent eugenicist with an interest in racial hygiene and an advocate of compulsory sterilization programs in the first half of the 20th century. Among his many students were Josef

Mengele. Verschuer was the director of the Institute for Genetic Biology and Racial Hygiene from 1935 to 1942 and director of the Kaiser Wilhelm Institute of Anthropology, Human Heredity, and Eugenics from 1942 to 1948. From 1951 to 1965 he was Professor of Human Genetics at the University of Münster, where he also served as Dean of the Faculty of Medicine. At Münster he established one of the largest centers of genetics research in West Germany, and remained one of the world's most prominent genetics researchers until his death. See: Sheila Faith Weiss: *After the Fall. Political Whitewashing, Professional Posturing, and personal Refashioning in the Postwar Career of Otmar Freiherr von Verschuer.* Isis, Vol. 101 (2010), 722–758; Peter Degen, "Racial Hygienist Otmar von Verschuer, the Confessing Church, and comparative reflections on postwar rehabilitation," pp. 155–65 in Jing Bao Nie, *Japan's Medical Wartime Atrocities* (London: Routledge & Kegan, 2010).
