1. **ACKERKNECHT, Erwin Heinz** (1906-1988). *Medicine at the Paris Hospital 1794-1848*. Baltimore: Johns Hopkins, 1967. 8vo. xiv, 242 pp. Frontispiece, 20 illustrations (Daumier vignettes), index. Black gilt-stamped quarter cloth and brown black-stamped boards; rubbed and extremities worn. Copious & valuable red-ink marginalia and underlining. Good.

\$ 25

This highly esteemed work is a comprehensive examination of French medicine through the history of the hospital.

2. **[BACON, Francis] ROSSI, Paolo** (1923-2012). *Francis Bacon; from Magic to Science*. London: Routledge & Kegan Paul, 1968. 8vo. vii, [1], 280 pp. Fig. (p. 200), index. Red gilt-stamped cloth, dust-jacket; rubbed. Very good. Translated from the Italian by Sacha Rabinovitch. \$ 11
3. **BAYLE, Antoine Laurent Jesse** (1799-1858); **August Jean THILLAYE** (editors). *Biographie Medicale par Ordre Chronologique, d'après Daniel Leclerc, Éloy, etc. Mise dans un Nouvel Ordre, Revue et Complétée*. [2 volumes in 1]. Paris: Adolphe Delahays, 1855. Two volumes in one. Thick 8vo. [4], 560; [4], 950 pp. Indices. Early quarter calf over marble boards; joints with kozo repairs. Light foxing, rear free endpaper has list of inked names in very fine handwriting, indicating names in work. Bookplate of A. Bernardes de Oliveira.

\$ 35

Second issue, being the same as the first edition of 1840-41 but with a new title page.

"... Bayle & Thillaye, although alphabetized only in the index, is the handiest of all, and was always on Osler's desk" – Garrison, *Sources of Medical Biography*, p. 699.

PROVENANCE: Antônio Bernardes de Oliveira (1901-1981) was a prominent Sao Paulo surgeon, and professor of surgery at the medical school of the University of Sao Paulo. He designed his Ex LIBRIS plate (Obituary, March 9, 1981, Academia de Medicina de São Paulo).

#### *Nazification of Science*

4. **[BEHRING, Emil von (1854-1917); ZEISS, Heinrich (1888-1949); R. Bieling (1888-1967).** *Behring, Gestalt und Werk*. Berlin: Bruno Schultz, 1941. Thick 8vo. 627, [1] pp. Index. Gray black-stamped cloth. „Bayer“ book plate. Very good+.

\$ 25

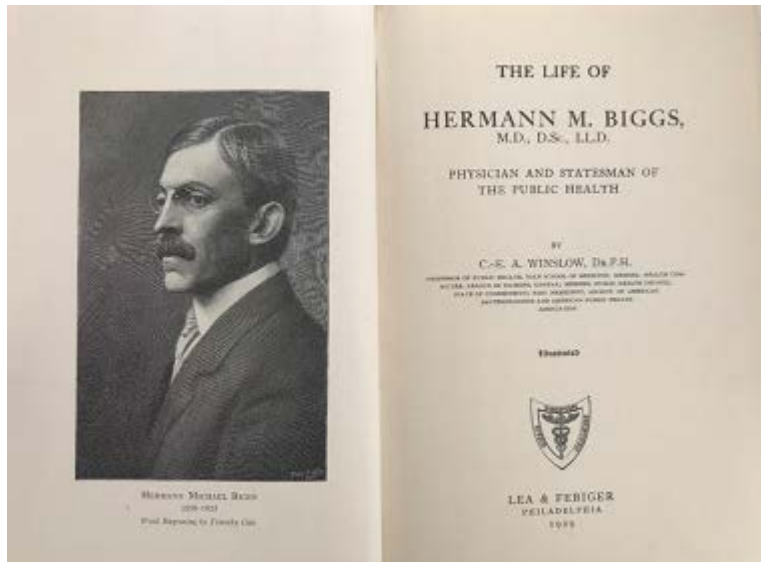

Second revised edition, 21-70 thousand. Zeiss was a committed Nazi, and used his biography of Emil von Behring to advance his “nationalist vision of medical history” to assist in the Nazification of science (Weindling, *Epidemics and Genocide in Eastern Europe, 1890-1945*, p. 201). The book is more propaganda than scientific biography. Subtle comparisons between microbes and Jews can be found in the text. An important artifact of how science can be perverted by dogma and ideology.

5. **[BERNARD, Claude] HOLMES, Frederic Lawrence (1932-2003).** *Claude Bernard and Animal Chemistry; The Emergence of a Scientist*. 7. **BERNARD, Jean (1907-); Jean-François LEMAIRE; Alain LARCAN.** *L'acte de naissance de la médecine moderne: la création des Ecoles de santé, Paris, 14 frimaire an III, 4 décembre 1794.* Paris: Synthélabo, 1995. Series: *Collection les empêcheurs de penser en rond.* 8vo. 125, [1] pp. Original printed wrappers. Very good. Symposium Proceedings. \$ 17.50
8. **[BICHAT] Nicolas DOBO; André ROLE.** *Bichat; La vie fulgurante d'un genie.* Paris: Perrin, 1989. 8vo. 364, [4] pp. Figs., index. Printed wrappers. Pages dog-eared. Very good. \$ 12
9. **[BIGGS, Herman Michael (1859-1923)] WINSLOW, Charles-Edward Amory (1877-1957).** *The Life of Herman M. Biggs M.D., D.Sc., LL.D.; Physician and Statesman of the Public Health.* Philadelphia: Lea & Febiger, 1929. 8vo. xv, 432 pp. Frontis. portrait, 34 illustrations, index. Red-gilt-stamped cloth, signature gilt-stamped on upper cover. Very good. \$ 43

“Hermann Michael Biggs (September 29, 1859 - June 28, 1923) was an American physician and pioneer in the field of public health who helped apply the science of bacteriology to the prevention and control of infectious diseases. Hermann Biggs, despite his Germanic forename,

was descended from an English emigrant who arrived in New England in 1690. He was a workaholic who was notable for his powers of concentration. These enabled him to study for a BA at Cornell University and medicine at Bellevue Hospital Medical College both at the same time, obtaining his degree from Cornell in 1882 and his MD the following year. He spent the year following his medical qualification as a house surgeon at Bellevue and then widened his horizons by travelling to Germany to study at Greifswald University and subsequently in Robert Koch's laboratory. On his return to the United States, thanks to his sojourn with Koch, he was the only physician in New York who knew how to stain for Mycobacterium tuberculosis. In 1887 he was the first after Koch to isolate the cholera vibrio, which he found in emigrants on SS Britannia. Cholera was imported to New York from Hamburg in 1892 and other

ports barred New York shipping which had a detrimental effect on trade. As a result of precautions taken by Biggs the embargo was temporary and commerce flourished. He advised that a municipal diagnostic laboratory should be set up and when this was done he was appointed its Director. Under his direction it became a model for the world and earned him Koch's commendation. In 1894 he managed to persuade the New York City Health Board that tuberculosis should be a notifiable disease. However the order was not made obligatory until 1897 and it was not until 1900 that some die-hard medical practitioners were forced to comply. Biggs was in Europe when Roux announced his diphtheria antitoxin so he cabled New York to organize its production in the city and it was distributed free to those unable to pay. He was appointed General Medical Officer for Health for New York City in 1902 and, until he relinquished the post in 1913, combined it with his direction of the laboratory. As well as dealing with cholera and tuberculosis, he stamped out a typhus epidemic in New York in 1897. In 1912 he chaired a commission which drafted public health legislation for the whole of New York State to bring it into line with New York City. He later held many administrative posts and his early death was considered to be in part caused by overwork." – London School of Hygiene & Tropical Medicine.

10. **BLOCH, Mark** (1886-1944). *The Royal Touch; Sacred Monarchy and Scrofula in England and France*. London: Routledge & Kegan Paul, 1973. First English edition. 8vo. xi, [1], 441, [1] pp. 5 plates, index. Purple gilt-stamped cloth, dust-jacket. Very good. ISBN: 0773500715 \$ 25
11. **BORDLEY, III, James** (1900-1979); **A. McGehee HARVEY** (1912-1998). *Two Centuries of American Medicine; 1776-1976*. Philadelphia: W. B. Saunders, 1976. 4to. xv, [1], 844 pp. Frontispiece, 171 figures, 6 tables, index. Red gilt-stamped cloth. Ownership rubber-stamp of Russell C. Maulitz. Fine. ISBN: 0721618731 \$ 11
12. **BOVE, Charles Frederick; Dana Lee THOMAS**. *A Paris Surgeon's Story*. Boston: Little Brown, 1956. First edition. Foreword by Leland Stowe (1899-1994). 8vo. ix, [3], 306 pp. Blue silver-stamped cloth. Rubber stamp on end paper, "Julian S. Long, M.D. Deposit and Savings Bank BLDG. Wilkes-Barre, PA." Very good. \$ 5
13. **BRYAN, Charles S**. *Saints of Humanity; Selections from Sir William Osler's recommended Bedside Library*. Columbia: American Osler Society and the John P. McGovern Foundation by the R. L. Bryan Co., 2002. Thin 8vo. [10], 116 pp. Burgundy gilt-stamped cloth. INSCRIBED BY AUTHOR on title page, "For Russ Maulitz with appreciation, Charles S. Bryan 4/15/02". Fine. \$ 18

Sir William Osler created a reading list for young physicians. Bryan has chosen selections of each of the works and presents them as bedtime readings for physicians and students of Osler's writings. Charles S. Bryan is Heyward Gibbes Distinguished Professor Emeritus of Internal Medicine at the University of South Carolina School of Medicine. In 1977, he became a charter faculty member at the USC School of Medicine, where he has served as Director of the Division of Infectious Diseases (1977-1993), Chair of the Department of Medicine (1992-2000), and Director of the Center for Bioethics and Medical Humanities. He is also an ardent Osler scholar.

First edition, second impression. THIS IS A RARE COPY OF THE HIGHLY RESPECTED AND AWARDED BIOGRAPHY OF SIR WILLIAM OSLER WITH THE ORIGINAL INSCRIPTION AND SIGNATURE OF HARVEY CUSHING. Harvey Cushing is often referred to as the father of neurosurgery. "Through his work on the pituitary gland, Cushing was also one of the founders of endocrinology. A well-read man who wrote a phenomenal amount throughout his long career (winning a Pulitzer Prize in 1926 for his hagiography of Sir William Osler), Cushing was also a noted bibliophile, a decent amateur medical historian, and a war hero" (Clarkfield, 2006, NEJM, Vol. 354, p. 534). His greatest contribution to medicine, however, may be his introduction of the Riva-Rocci sphygmomanometer to the United States, and his introduction of blood pressure as a vital sign. His interest in William Osler was personal. In World War I he treated Osler's son, Edward, who did not survive the war.

PROVENANCE: Donald C. Hoffman, M.D., was with the Rockefeller Institute for Medical Research, and Assistant in Medicine, Boston City Hospital. He wrote (or co-wrote) various research papers including, "The Electric Charge of Mosaic Virus Particles" (1930), "The Influence of Testicle Extract on the Intradermal Spread of Injected Fluids and Particles" (1930), "Properties of the Causative Agent of a Chicken Tumor," (1932).

Coleman taught at Johns-Hopkins and the University of Wisconsin. He was President of the History of Science Society. The book centers on Rene Villermé's study, *Tableau de l'état physique et moral des ouvriers employés dans les manufactures de coton, de laine et de soie*, the first study of urban health issues. While Villermé found that the urban poor had high morbidity and mortality compared to other classes, he refused to argue for government intervention, choosing to rely on private solutions to resolve the matter. Death remained a "social disease" until the dawn of government health care in France.

This is the hardback in jacket; a softcover issue was also issued. Two book reviews laid in. "In this wide-ranging exploration of American medical culture, John Harley Warner offers the first in-depth study of a powerful intellectual and social influence: the radical empiricism of the Paris Clinical School. After the French Revolution, Paris emerged as the most vibrant center of Western medicine, bringing fundamental changes in understanding disease and attitudes toward the human body as an object of scientific knowledge. Between the 1810s and the 1860s, hundreds of Americans studied in Parisian hospitals and dissection rooms, and then applied their new knowledge to advance their careers at home and reform American medicine. By reconstructing their experiences and interpretations, by comparing American with English depictions of French medicine, and by showing how American memories of Paris shaped the later reception of German ideals of scientific medicine, Warner reveals that the French impulse was a key ingredient in creating the modern medicine American doctors and patients live with today. Impressed by the opportunity to learn through direct hands-on

physical examination and dissection, many American students in Paris began to decry the elaborate theoretical schemes they held responsible for the degraded state of American medicine. These reformers launched an empiricist crusade "against the spirit of system," which promised social, economic, and intellectual uplift for their profession. Using private diaries, family letters, and student notebooks, and exploring regionalism, gender, and class, Warner draws readers into the world of medical Americans while investigating tensions between the physician's identity as scientist and as healer." – publisher. John Harley Warner is professor and chair of the history of medicine and science at Yale University, where he is also professor of American studies and history. He is the author of *The Therapeutic Perspective: Medical Practice, Knowledge, and Identity in America*, and co-editor (with Janet Tighe) of *Major Problems in the History of American Medicine and Public Health*. "Against the Spirit of the System provides the best view yet of a lost medical culture... It is enormously important for anyone seeking to understand either nineteenth-century medical life in America, or how culture and memory come to be embedded in physicians' careers." — *Bulletin of the History of Medicine*.
