SELECTIONS FROM THE LIBRARY OF RUSSELL C. MAULITZ, MD

RUSSELL C. MAULITZ, M.D., PH.D. completed his M.D. and Ph.D. (in History of Medicine) at Duke University. He has served on the editorial boards of three major journals in the fields of medical history and technology and society. He is author of four books, monographs and translations, and over fifty articles in the fields of medical history and medical informatics. As Principal Investigator he has been the recipient of major research grants from the American College of Physicians, the U.S. Office of Naval Research, the National Institutes of Health, the Charles E. Culpeper Foundation, and the Burroughs Wellcome Fund.

As author, Maulitz has written both articles and books, many dealing with the history of medicine, pathology, epidemiology, cholera, plagues, and medical education, including: "Schwann's Way: Cells and Crystals," *Journal of the History of Medicine and Allied Sciences*, Vol. XXVI, No. 4, October 1971. "Esmond Long" for Oxford University Press. "The Pathological Tradition," a contribution to W. F. Bynum, *Companion Encyclopedia of the History of Medicine*. "Channel Crossing: The Lure of French Pathology for English Medical Students, 1816-36," *Bulletin of the History of Medicine*, 1981. "Robert Koch and American Medicine," *Annals of Internal Medicine*, 1982. "The King's Evil in Oxfordshire," *Medical History*, 1973. RC Maulitz, RM Poses, MJ Young, "Medical history as an introduction to clinical reasoning," *Academic Medicine*, 1983. "In the clinic: Framing disease at the Paris hospital," *Annals of Science*, 1990. "The physician and authority: a historical appraisal," *The Physician as Captain of the Ship*, A Critical Reappraisal, Editors: King, N.M., Churchill, L.R., Cross, Alan W. (Eds.) Springer, 1988.

ALL BOOKS ILLUSTRATED ON-LINE at WeberRareBooks.com

Medical Histories Contributed by Maulitz

1. **ACKERKNECHT, Erwin Heinz** (1906-1988). *A Short History of Medicine*. New York: Ronald Press, 1955. ¶ 8vo. xviii, 258 pp. 28 plates, numerous illustrations, tables, index. Burgundy silver-stamped cloth. Near fine. MRM1072 \$ 11
2. **ACKERKNECHT, Erwin Heinz** (1906-1988). *Medicine and Ethnology; Selected Essays*. Baltimore: Johns Hopkins Press, 1971. ¶ 8vo. 195, [1] pp. Index. Blue gilt-stamped cloth. Fine. ISBN: 0801813077 Edited by Hans Huldrych Walser (1920-) and Huldrych Martin Koelbing (1923-2007). Introduction is a 10-page interview with Ackerknecht. Contents: Typical Aspects; Culture and Medicine of the Cheyennes, Dobuans, and Thonga; The Shaman and Primitive Psychopathology in General; Autopsies and Anatomical Knowledge; Surgery and Its Paradoxes; On the Collecting of Data; Some Problems; Naturalistic and Supernaturalistic Diagnoses and Treatments; Incubator and Taboo; Primitive Medicine's Social Function. Garrison and Morton 6467.2. MRM1073 \$ 28
3. **ACKERKNECHT, Erwin Heinz** (1906-1988). *Therapeutics; From the Primitives to the 20TH Century; with an Appendix: History of Dietetics*. New York: Hafner Press, 1973. ¶ 8vo. x, 194 pp. Index. Burgundy gilt-stamped cloth. Ownership rubber stamp of Russell C. Maulitz. Near fine. ISBN: 028400607 MRM1074 \$ 50
4. **ADDISON, Thomas** (1793-1860). *Anemia: Disease of the Supra-Renal Capsules (1849)*. WITHIN: *Medical Classics* Vol. 2 No, 3, November 1937. Baltimore: Williams & Wilkins, 1937. ¶ 8vo. [2], 233-280 pp. Frontis., 9 plates. Wrappers; some fading and wear. Good plus. General editor, Emerson Crosby Kelly (1899-1977). Additional articles: Anemia; Disease of the Supra-Renal Capsules (1849); On the Constitutional and Local Effects of Disease of the Supra-Renal Capsules (1855). MRM1075 \$ 26

5. **AMAUDRIC, J. Fortuné.** *Essai sur L'Humorisme et le Solidisme... a la faculté de médecine de Montpellier, le 31 Juillet 1811.* Montpellier: Jean Martel, 1811. 24.5 cm. 41 pp. Printed self-wraps; some foxing to title page, soiled. Good. RARE.

MRM1076 \$ 100

Dissertation. "Fifty years ago [c.1800-1810], the professional mind seemed to be settled down into exclusive and absolute solidism. It had reached this position after a contest of centuries, and was in none too good humor with an adversary that had held out so long, and whose fascinations had been so hard to withstand. We not only disowned humoralism, but scouted and ridiculed it. The philosophical determinations of Bichat and Cullen, had found lively and effective co-operators in the pasquinades of Moliere and Peter Pindar." Joshua B. Fint, "A Discourse,"

Semi-Monthly Medical news, Louisville, Kentucky, June 1, 1859, p. 329.

ALSO: "In re-evaluating the concept of the fibre," Ishizuka "seeks to redress the neuro-centric view of eighteenth-century medicine, and attempts to locate the fibre body amidst the fundamental shift from humoralism to solidism." " In short, fibre and 'fibre theory' (ie. the theoretical articulation of fibres) occupied a critical place in eighteenth-century medicine, particularly in theoretical medical discourse. Eighteenth-century medical discourse from c. 1700 to c. 1740 is pervaded with fibre-related terms and descriptions such as 'membranes', 'web', 'stamina', 'weaving', 'vibrating', 'folding', 'tone' and 'tension', rather than 'nerves' and the 'nervous system'. These and similar fibre-related words constitute the terminology of the 'Fibre Body'. The prevalence of this vocabulary bears witness to a concerted effort of medical theorists to transform the older medical theory of the 'humoral' and fluid body into a theory of solidism... The radical shift from humoralism to solidism, hitherto relatively neglected by medico-cultural historians, is more indispensable for the understanding of the emergence of the modern body than one might assume. The fibre body reigns amidst this shift." - H. Ishizuka, 'Fibre Body': The Concept of Fibre in Eighteenth-century, 2012.

6. **ANDERS, James M.** (1854-1936). *Philadelphia – World's Medical Centre; by Word and Picture: This Book Typifies the Tremendous Growth of Philadelphia's Institutions in the Field of Medical Science and Proves Conclusively its Right to the Title, World's Medical Centre.* Philadelphia:

[1930]. ¶ 4to. Copious photos and illus. 108 pp. Blue gilt-stamped cloth; library markings. Very good.

MRM1077 \$ 25

Contents: "History of the Outstanding Achievements of Philadelphia as a Medical Center" – "A brief History of the Philadelphia County Medical Society" – John Welsh Croskey, "Philadelphia General Hospital," [etc.]. Medical boosterism at its best. Using a series of faux newspaper headlined articles, Philadelphia is presented as the Mecca of Modern Medicine in the world. Articles are contributed by leading local physicians, such as Dr. Anders, author of *The Theory and Practice of Medicine*, and a Chevalier of the Legion of Honor in France. Each hospital and medical college in the area is highlighted in the article-style format, and amongst the serious descriptions, superlatives abound. A remarkable historical artifact of Philadelphia medicine and its culture in 1930. There are two issues of this work, one with 156 pages, and this one with 108 pages.

7. **ANDRAL, Gabriel** (1797-1876). *Cours de Pathologie Interne [Vol. II]*. Paris: Libraire des Sciences Medicales, 1836. ¶ Volume 2. 8vo. 447, [1] pp. Quarter black cloth, marbled boards, printed paper spine label; later binding. Bookplate of Thomas Hun. Very good. MRM1078 \$ 40
8. **ARMSTRONG, John** (1784-1829). *Practical Illustrations of Typhus Fever of the Common Continued Fever, and of Inflammatory Diseases, &c. &c.; with notes, Critical and Explanatory, by Nathaniel Porter, M. D.* Philadelphia: James Webster, 1821. ¶ 8vo. xvi, [13]-468 pp. Errata slip bound-in. Later brick red gilt-stamped buckram. Mercantile library Philadelphia rubberstamps on title, p.81, p. 349. Else very good. MRM1079 \$ 30
9. **[Artelt, Walter & Edith Heischkel-Artelt] EULNER, Hans-Heinz** (1925-1980); **Gunter MANN; Gert PREISER** (b. 1928); **Rolf WINAU** (1937-2006); **Otto WINKELMANN** (1931-2014) (editors). *Medizingeschichte in unserer Zeit, Festgabe für Edith Heischkel-Artelt und Walter Artelt zum 65. Geburtstag*. Stuttgart: Ferdinand Enke, 1971. ¶ Thick 8vo. xi, [1], 491, [1] pp. 6 plates, illus., index. Green gilt-stamped cloth, dust-jacket; jacket extremities worn, lower corner prominently dented. Inked ownership SIGNATURE OF RICHARD H. SHRYOCK; book store receipt laid in, made out to "Herrn Professor Dr. Richard H. Shryock". Good +. ISBN: 3432016980

MRM1080 \$ 27

Festschrift honoring Edith Heischkel-Artelt (1906-1987) and Walter Artelt (1906-1976), married for a long time, with essays on the history of medicine, themselves both medical historians. Edith Heischkel-Artelt, German physician and medical historian, retired in 1974. Walter Artelt, himself also a German physician, dentist and medical historian. Selected contents: Albert Dietrich, Eine wenig beachtete arabische Übersetzung

der Materia medica des Dioskurides; Adalberto Pazzini, *Arte e medicina nei secoli XIII e XIV*; Jushua O. Leibowitz, *Ein volksmedizinisches Buch in jüdisch-deutsch*. (I. Teller, Prag, ca. 1650); Rolf Winau, *Leibrärzte des Grossen Kurfürsten*; etc. **PROVENANCE**: Richard Harrison Shryock (1893-1972), during his lifetime, was the preeminent historian of medicine in the United States and Europe. On his 75th birthday an entire issue of the journal *History of Medicine and Allied Sciences* was devoted to his accomplishments. The American Association for the History of Medicine awards the Shryock Medal annually to graduate students in the history of medicine.

10. **AURELIANUS, Caelius** (5th Century A.D.). *On Acute Diseases and on Chronic Diseases*. Chicago: University of Chicago Press, 1950. ¶ Thick 8vo. xxvi, vii, [1], 1019, [1] pp. Indices. Red gilt-stamped cloth; minor fading. **INKED INSCRIPTION FROM TRANSLATOR**, Israel Edward Drabkin (1905-1965), "To Renata and Ludwig Edelstein with affectionate greetings. I. E. Drabnik Nov. 1950". Near fine.

MRM1081 \$ 65

INSCRIBED BY TRANSLATOR ISRAEL EDWARD DRABKIN. Israel Edward Drabkin (1905-1968), the translator and editor, was a "Carnegie Fellow in Greek and Roman Science at the Johns Hopkins University in 1941-43, Visiting Assistant Professor of Classics at the University of Chicago in 1945, John Simon Guggenheim Fellow in 1945-46, Fielding H. Garrison Lecturer for the American Association of the History of Medicine in 1951, a member of the Institute for Advanced Study at Princeton in 1953, and Visiting Professor of the History of Science at Harvard University in 1964. His numerous publications both in the classics and in the history

of science won him an enviable reputation both here and abroad. He collaborated with Professor Morris Raphael Cohen on *A Source Book in Greek Science*. His edition of Caelius Aurelianus *On Acute and Chronic Diseases* was published by the University of Chicago Press. He had the distinction, rare in the present century, of discovering a lost work of antiquity, the *Gynaecia* of Caelius Aurelianus, which he edited with his wife, Miriam Friedman Drabkin (Obituary, *American School of Classical Studies at Athens*, 84TH Annual Report, 1965, p. 18). **PROVENANCE**: Ludwig Edelstein "was one of the great modern scholars of Greek medicine. The first part of his life he spent in Germany, the latter part in the United States, chiefly at Johns Hopkins and the Rockefeller University. A man of great personal integrity and profound scholarship, he achieved scholarly renown in philology, philosophy, and history of medicine. He is perhaps most widely known for his definitive work on

Asclepius, published with Mrs. Edelstein." (Obituary, JAMA, 1968, Vol. 203, Iss. 1, p. 60). Garrison and Morton 1959.1.

11. **BAUER, Edward Lewis** (1890-1965). *Doctors Made in America*. Philadelphia: J. B. Lippincott, 1963. ¶ 8vo. xxii, 370 pp. 8 plates, index. Quarter black gilt-stamped cloth over decorative boards, dust-jacket; jacket extremities worn. Very good. A history of Jefferson Medical College and its alumni. MRM1082 \$ 5
12. **BECLARD, Pierre Auguste** (1785-1825). *Elements of General Anatomy, or, a Description of Every Kind of Organs Composing the Human Body*. Philadelphia: Carey and Lea, 1830. ¶ Thick 8vo. xv, [3], 541, [1], 8, 4 pp. Ads at rear; light foxing. Modern quarter dark blue cloth with gray boards, gilt-stamped brown leather label; spine faded. Occasional foxing; pp. 425-511 age-darkened. Very good. MRM1083 \$ 125
Translated by Joseph Tognio M. D., a translator of French medical books and a member of the Philadelphia College of Physicians of Philadelphia. A biographical essay on Beclard is included, written by C. P. Olivier D'Angers. Dedicated to Bichat, Beclard and John D. Godman.
- 
13. **BELL, Whitfield J.** (1914-2009). *The Colonial Physician & Other Essays*. New York: Science History Publications, 1975. ¶ 8vo. [8], 230 pp. 11 illustrations. Wrappers; some rubbing. Very good. ISBN: 9780882020242 Limited Commemorative edition. Prepublication limited issue, copy number 80 of 234 copies. MRM1084 \$ 10
14. **BERNARD, Claude** (1813-1878). *Leçons sur les Phénomènes de la vie Communs aux Animaux et aux Végétaux*. Paris: J. Vrin, 1966. ¶ Facsimile. [volume 1 (of 2)]. 8vo. [14], xxxi, [1], 404 pp. 52 figs., index. Original printed wrappers, dust-jacket. Very good plus. Preface by Georges Canguilhem (1904-1995). A sought-after Larousse facsimile printing of the 1885 second edition. The dust-jacket shows "Librairie Générale Larousse-Sorbonne, 58, Rue Des Ecoles-Paris V" as well as the sub-heading "ayez toujours un petit larousse sous la main", which is good advice for a reader of this catalogue. MRM1085 \$ 25
15. **[BERNARD, Claude (1813-1878)] SCHILLER, Joseph** (1905-1976). *Claude Bernard et les Problèmes Scientifiques de son Temps*. Paris: Les Editions du Cèdre, 1967. ¶ 8vo. 230, [2] pp. Original wrappers. Very good. MRM1089 \$ 10

16. **BERNARD, Claude** (1813-1878). *Cahier de notes (1850-1860): édition intégrale du "Cahier rouge". Présentée et commentée par Mirko Drazen Grmek ; préf. de Robert Courrier*. Paris: Gallimard, 1965. ¶ 8vo. 315, [5] pp. Illus., index. Printed wrappers. Very good.
MRM1086 \$ 7
Commentary by Mirko Drazen Grmek (1924-2000). Preface by Robert Courrier (1895-1986).
17. **[BERNARD, Claude (1813-1878)] BINET, Leon** (1891-1971) (editor). *Esquisses et Notes de Travail Inédites de Claude Bernard; Recueillies et Commentées*. Paris: Masson & Cie, 1952. ¶ 8vo. [6], 109, [3] pp. 16 plates. Beige wrappers; spine head chipped, glassine torn. Many pages partially uncut. Very good.
MRM1087 \$ 14
18. **[BERNARD, Claude (1813-1878)] HOFF, Hebbel H.; Lucien GUILLEMIN; Roger GUILLEMIN** (editors). *The Cahier Rouge of Claude Bernard*. Cambridge: Schenkman, 1967. ¶ 8vo. [2], vi, 120 pp. Illus. Burgundy gilt-stamped cloth, dust-jacket; jacket worn. Fine book in poor jacket.
MRM1088 \$ 8
19. **[BERNARD, Claude (1813-1878)] WOLFE, Etienne** (1904-1996). *Philosophie et méthodologie scientifiques de Claude Bernard: colloque international organisé pour la célébration de la publication de "L'introduction à l'étude de la médecine expérimentale" de Claude Bernard (1965)*. Paris: Masson & Cie, 1967. ¶ Series: Fondation Singer-Polignac. 8vo. [vi], 170, [2] pp. Brown black-stamped cloth, cover label, plain brown jacket. Very good.
MRM1090 \$ 25
Proceedings of a colloquium organized by the Fondation Singer--Polignac, held in Paris, June 29-July 2, 1965. Partial contents (thirteen contributors): Christian Fouchet, Allocution; B.A. Houssay, La Notion d'intégration et de stabilité des fonctions de l'organisme depuis Claude Bernard; Georges Canguilhem, Théorie et technique de l'expérimentation chez Claude Bernard ...
20. **[BICHAT, Marie François Xavier (1771-1802)] MONTEIL, Jean**. *Le Cours d'Anatomie Pathologique de Bichat: Un nouveau manuscrit*. Grenoble: Guirimand, 1963. ¶ 8vo. 46, [2] pp. Frontis. portrait, 3 plates. Printed wrappers; gently used, cover smudge. Very good.
MRM1092 \$ 45
A somewhat controversial work, referring to a manuscript that is attributed by Monteil to Bichat, but not to universal scholarly assent. The manuscript has been in the Grenoble Medical School Library since 1902, and was studied by several scholars (including Genevieve Genty when preparing her 1943 thesis on Bichat) who questioned whether the

author was Bichat. She believes it is genuine, but other scholars, including Esmond Long, were doubtful. Monteil makes a strong case. It is a good read, as a scholarly study or even as a kind of medical whodunit of sorts.

21. **BICHAT, Marie François Xavier** (1771-1802). *Physiological Researches on Life and Death*. Boston: Richardson and Lord, 1827. ¶ 8vo. viii, (9)-334 pp. Original calf, gilt-ruled spine, red leather gilt-stamped label; joints repaired with kozo. Pages browned, foxed, and waterstained throughout. Owner's penciled name, "W. C. Bettencourt" [of Wilmington, North Carolina, fl.1854-1880s] on front free-endpaper and preface-page. Good.

MRM1093 \$ 90

First Boston edition after the Philadelphia 1809 edition, which translated with second edition of Bichat. This issue translated by F. Gold, with notes by François Magendie (1783-1855), with added notes translated by George Hayward M. D. "When Volta questioned the validity of experiments claiming to show responsiveness of an ex vivo heart, devoid of blood flow and nervous connections, Bichat obtained permission to experiment on the freshly killed bodies of those guillotined during the French Revolution. His trials on both laboratory animals and human cadavers led him to conclude that cardiac excitation by electricity would occur only when the organ was simulated by direct contact." – Garrison and Morton 597.

PROVENANCE: William C. Bettencourt, Wilmington, North Carolina, "first arrived in New Hanover County, North Carolina, as an immigrant from France in 1817. He had a wife Mary, a son William H. "Willie", and a daughter Amy. Bettencourt seems to have had significant financial resources and become prominent socially. He served as a director of the Wilmington & Weldon Railroad, ca. 1861–1862. He also served as postmaster in Wilmington for many years, from at least 1846 to the 1880s. In the 1850s he appears to have been a U.S. Treasury Department official in Wilmington. As a consequence, he had some political influence in the state of North Carolina and often traveled back and forth to Chapel Hill for business." – East Carolina University Joyner Library.

22. **BICHAT, Xavier.** *Traité des Membranes en Général et de Diverses Membranes en Particulier.* Paris: Gabon, [1827]. ¶ 8vo. xxxiv, 349 pp. Early quarter gilt-stamped black calf, marbled boards. Fine copy.

MRM1094 \$ 200

Early edition, augmented with the notes of François Magendie (1783-1855). "Bichat conceived the idea of a science of anatomy and pathology based upon an accurate classification of the various tissues of the body, their distribution in the various organs and parts, and their particular susceptibilities to disease (Corner). He is regarded as the founder of modern histology and tissue pathology." - Garrison and Morton 537.

"The foundation of histology and tissue pathology. Bichat generalized Pinel's theory, expressed in *Nosographie Philosophique* (1798) that pathology must be based upon the structure on the tissues of which bodily organs are composed, regardless of where in the body they occur. Bichat distinguished twenty-one different types of tissue, which he classified according to texture and to properties: extensibility, contractility, and the vital properties--organic contractility and sensibility ('insensible' or 'subliminal') on the one hand, and animal contractility

and sensibility ('sensible' or 'conscious') on the other. Each tissue differed in its diseases, as diseases were nothing more than alterations in the tissue's vital properties. Claude Bernard said of Bichat that he 'decentralized life and incarnated it in the tissues' - Norman in Hall II, 129.

23. **BILLINGS, John Shaw** (1838-1913); **Frank Bradway ROGERS** (1914-1987) (editor). *Selected Papers of John Shaw Billings; Compiled with a Life of Billings, by Frank Bradway Rogers*. Washington D.C.: Medical Library Association, 1965. ¶ 8vo. vi, 300 pp. Frontis. portrait, complete Shaw bibliography. Dark green gilt-stamped cloth. Near fine. MRM1095 \$ 14

24. **BILLROTH, Theodor** (1829-1894.). *General Surgical Pathology and Therapeutics, in fifty-one lectures. A text-book for students and physicians*. New York: D. Appleton, 1884. ¶ Thick 8vo. xvi, 835, [1], [44] (publisher ads) pp. 169 illus. index; occasional minor marginalia. Modern light-brown cloth, gilt-stamped label. Mostly clean pages, though a marginal waterstain shows at top gutter. Library rubber stamp, "Med. Soc. County of Kings Library" on title. Very good +.

MRM1096 \$ 40

Expanded textually. Translated from the Fourth German edition and revised from the tenth edition by Charles E. Hackley. Some additions to text by Alexander von Winiwarter (1848-1917). "Billroth, professor of surgery at Zürich and Vienna, was the founder of the Vienna School of Surgery. He has also been called the founder of modern abdominal surgery, and he was one of the first to introduce antiseptics into the Continental operating room. The above work, which placed him in the front rank, was translated into ten languages." – Garrison and Morton 5608 (1863 ed.).

25. **BILLROTH, Theodor** (1829-1894.). *General Surgical Pathology and Therapeutics; In Fifty-One Lectures. A Text-Book for Students and Physicians*. New York: D. Appleton, 1885. ¶ Thick 8vo. xvi, 835, [1], [8] (publisher ads) pp. 169 illus. index. Brown blind- and gilt-stamped cloth; some wear to extremities and spine, top area of spine nicked, joints repaired. Library rubber stamp and plate, "Pennsylvania Hospital Medical Library". Inked owner signature on front paper and on pp. 1, 802, "Daniel H. Fuller, M.D." and "D. H. Fuller Harvard Med. School". Good. Translated from the Fourth German edition and revised from the Tenth edition by Charles E. Hackley. Some additions to text by Alexander von Winiwarter (1848-1917). MRM1097 \$ 60

26. **BILLROTH, Theodor** (1829-1894). *The Medical Sciences in the German Universities*. New York: Macmillan, 1924. ¶ 8vo. xiii, [1], 292 pp. Green blind- and gilt-stamped cloth; small

discoloration on upper cover. Inked owner's signature, "Norman M. Keith, Jan. 1925." Very good.

Translated (unattributed) from the 1876 German edition. Introduction by William Henry Welch (1850-1934). Welch was one of the "Big Four" group of Johns Hopkins Hospital founders, and the first dean of the Medical School. Cushing B401; Garrison and Morton 1766.603; Heirs of Hippocrates 2040 (German ed.); Waller 12694. See: DSB, II, pp. 129-131.

27. **BLAKE, John Ballard** (1922-2006) (editor). *Centenary of Index Medicus 1879-1979*. Bethesda: U. S. Department of Health and Human Services, 1980. ¶ Series: NIH Publication No. 80-2066. 8vo. vii, [1], 115, [1] pp. Brown gilt-stamped cloth. Fine. MRM1099 \$ 11

28. **BLAKE, John Ballard** (1922-2006) (editor). *Education in the History of Medicine. Report of a Macy Conference...* New York: Hafner, 1968. ¶ First printing. 8vo. [4], 132 pp. Blue gilt-stamped cloth, dust-jacket; jacket a bit worn. Ownership stamp of Russell C. Maulitz. Very good. MRM1101 \$ 10

Proceedings of a MACY Conference Sponsored by the Josiah Macy, Jr. Foundation in cooperation with the National Library of Medicine, Bethesda, Maryland, June 22-24, 1966. Contents: The "New Wave" in the History of Medicine; What Medical History Should be Taught to Medical Students; Who Should Teach the History of Medicine? The History of Medicine as Part of the University Complex; How to Support and promote the History of Medicine.

29. **BLAKE, John Ballard** (1922-2006). *The Bicentennial of Medicine in the United States: A Commentary. Within: Epilogue; Essays at the Bicentennial of Medicine in the United States*. Bethesda: U.S. Department of Health, Education, and Welfare, 1976. ¶ 8vo. [6], 33, [1] pp. Red gilt-stamped cloth. Fine. Foreword by Martin M. Cummings (1920-2011). Other essays: The Role of a Medical Library (W. N. Hubbard, Jr.); Quo Vadis, U.S. Medicine? (Philip Handler). MRM1102 \$ 10

30. **BLASER, R.; H. BUSS** (editors). *Aktuelle Probleme aus der Geschichte der Medizin. Current Problems in History of Medicine; Verhandlungen des XIX. Internationalen Kongresses für Geschichte der Medizin. Proceedings*

of the XIXth International Congress for the History of Medicine. Basel, 7.-11. September 1964. Basel: S. Karger, 1966. ¶ Thick 8vo. xxviii, 687, [1] pp. Illus. Blue gilt-stamped cloth; faded spine, slight bowing, rubbed, corners bumped. Inked owner signature, "Russell C. Maulitz, Zurich, Geneva, and Paris, June 1972". Very good.

MRM1103 \$ 10

Polyglot collection of essays from the proceedings of the 19th International Congress for the History of Medicine: English, German, Spanish, French, and Italian.

31. **[BOERHAAVE, HERMAN (1668-1738)].** **UNDERWOOD, Edgar Ashworth (1899-1980).** *Boerhaave's Men at Leyden and After.* Edinburgh: Edinburgh University Press, 1977. ¶ 8vo. vii, [1], 227, [1] pp. 16 plates, index. Brown gilt-stamped cloth, dust-jacket; jacket lightly worn. Very good. ISBN: 0852243049

MRM1104 \$ 12

32. **BONNER, Thomas Neville (1923-2003).** *American Doctors and German Universities; A Chapter in International Intellectual Relations, 1870-1914.* Lincoln: University of Nebraska Press, 1963. ¶ 8vo. ix, [1], 210 pp. Index. Gray gilt-stamped cloth, dust-jacket; jacket extremities worn, slight waterstaining to outer edges on d.j. Ownership initials of Russel C. Maulitz. Very good.

MRM1105 \$ 200

First edition. "Bonner, provides an historical context for medical education that is long overdue. This is a comparative international history..." (web-source). Bonner was an important medical historian, as well as the President of the University of New Hampshire, Wayne State University, and Union College. This history of cultural and scientific exchange remains a touchstone of medical history scholarship.

33. **BOWERS, John Zimmerman (1913-1993); Elizabeth F. PURCELL (editors).** *Advances in American Medicine: Essays at the Bicentennial.* New York: Josiah Macy, Jr. Foundation, 1976. ¶ Two volumes. Tall 8vo. viii, [2], 457, [1]; v, [3], 459-918 pp. Illustrations, index. Blue white-stamped

cloth, printed glassine covers. Ownership signatures R. C. Maulitz M.D.
Near fine. Extra postage will apply. ISBN: 0914362178 MRM1107 \$ 10

34. **BOWERS, John Zimmerman** (1909-1989). *Western Medical Pioneers in Feudal Japan*. Baltimore: Johns Hopkins Press, 1970. ¶ 8vo. xi, [3], 245, [1] pp. Illus., glossary, index. Black blind- and gilt-stamped cloth, dust-jacket. Pages 209-226 creased. Very good.

MRM1108 \$ 8

"Dr. Bowers had a keen interest in the Far East that dated to the years after World War II, when he was sent to Japan by the Atomic Energy Commission to examine survivors of the atomic-bomb attacks on Hiroshima and Nagasaki. He returned in the 1960's for three years as a visiting professor at the University of Kyota. His books include "Western Medical Pioneers in Feudal Japan" (Johns Hopkins, 1970) and "When the Twain Meet: The Rise of Western Medicine in Japan" (Johns Hopkins, 1981)." He was co-editor of two volumes of essays, "Advances in American Medicine" (Books on Demand) and "Science & Medicine in Twentieth-Century China" (University of Michigan, 1989). (New York Times obituary, October 19, 1993).

Owner inked signature, and rubber stamp in both volumes, "T. Dunet D.M. A. Nuits".

MRM1388 \$ 100

Early edition. Broussais was extremely popular during his time, known as "the emperor of medicine." This particular work was written in criticism of Pinel and Laennec. He considered himself in opposition of dogma and systems, creating his own elaborate system. The present work deals heavily with inflammation, for which Broussais offers therapies of diet and leeches. It was first written and issued in 1816 and the author continued to edit the work, eventually expanding it to 2,600 pages in 4 volumes. "Surgeon of the armies of France and professor of general pathology and therapeutics at Paris, Broussais was the most celebrated French practitioner of his day, and, according to Arturo Castiglioni, the "most sanguinary physician in history" - Castiglioni, *A history of medicine*. New York, 1946. p. 699.

Although he taught the importance of clinical observation, Broussais' rigid attitudes regarding his often erroneous theories hindered more often than helped the progress of French medicine. Broussais believed that the basis of all pathology was gastroenteritis and that debilitating treatment was called for in nearly every disease. His most common remedy was the application of leeches to the stomach or the head. The popularity of his methods is evidenced by the fact that during one year, over 35,000,000 leeches were imported into France. Broussais was not popular among his Parisian medical colleagues and the preface to the present work is a vicious diatribe against those who refused to believe in his medical theories. The book was written only a year or two after he went from military service into private practice, and many of his arguments are based on observations he made while on the medical faculty at the military hospital at Val de Grâce." – Heirs of Hippocrates 1265.

PROVENANCE: Henry House Viets (1890-1969) was a neurologist and medical historian, serving as Professor of Medicine at Harvard for 36 years. He specialized in myasthenia gravis "and established the first clinic in the world for diagnosis and treatment of the disorder" (Richard J. Wolfe, Bulletin of the Medical Library Association, Vol 57, 1969).

54. **CHARCOT, Jean-Martin** (1825-1893). *Lectures of the Diseases of the Nervous System; Delivered at La Salpêtrière*. [Volume two of three volumes]. Second series. London: New Sydenham Society, 1881. ¶ Volume 2 of 3 volumes. 8vo. xvi, 399, [1] pp. 36 figures, index, 17 plates [for volumes I and II]. Brown blind- and gilt-stamped cloth; neatly rebaked, brick-red cloth spine label. Bookplate of Geo. Jno. Eady. Owner's rubber stamp of H. Houston Merritt, M.D. Very good. MRM1129 \$ 35

A book by one of the giants of modern-day neurology, owned by one of the founders of modern-day neurology. Translated by George Sigerson (1836-1925). Sigerson studied with Charcot in Paris, and while there became friends with a fellow student of Charcot – Sigmund Freud.

PLATES: [Volume I Plates] 1: Disseminated Sclerosis (Encephalon); 2: Disseminated Sclerosis (Cerebrum); 3: Disseminated Sclerosis (Spinal Cord); 4: Disseminated Sclerosis (Spinal Cord); 5: Hysterical Ischuria; 6: Hysterical Ischuria; 7: Hysterical Ischuria; [Volume II Plates] 1: Sclerosis of the Posterior Columns; 2: Pott's Disease; Paraplegia; 3: Pott's Disease; Paraplegia; 4: Symmetrical Sclerosis of the Antero-Lateral Columns; 5: Symmetrical Sclerosis of the Antero-Lateral Columns; 6: Locomotor Ataxia; Atrophy; 7: Protopathic Muscular Atrophy; 8: Protopathic Muscular Atrophy; 9: Locomotor Ataxia; 10: Locomotor Ataxia.

Charcot identified and named amyotrophic lateral sclerosis, also known as Charcot's Disease [discussed at length in Lectures XII and XIII], building on the discoveries of Charles Bell (1774-1842). Charcot performed seminal research on the pathogenesis of what he called "sclérose en plaques" (known today as Multiple Sclerosis). He identified the still-used triad of symptoms for MS diagnosis – poorly articulated speech (dysarthria), jerky movements of the eyes (nystagmus), and trembling of the arms when taking an object – by observing one of his servants who presented with the illness. He is the only 19TH century French physician to have a song dedicated to him by the Alan Parsons Project in its album *Freudiana* ("Let Yourself Go"). Charcot also discusses syphilis at length in the book.

PROVENANCE: George J. Eady, M.R.C.S. Eng., L.R.C.P. Edinburgh, Surgeon, Juglans Lodge, Enfield (fl.1870-98) - Hiram Houston Merritt (1902-1979), was Moses Professor Emeritus of Neurology, dean emeritus, and vice-president emeritus of medical affairs at Columbia University's College of Physicians and Surgeons. He co-developed the anti-convulsion drug Dilantin. "Dr. Merritt also made important, original contributions in the understanding of how syphilis affects the brain. He was a co- author of a book that became a classic in the field because it crystallized the medical thinking about what then was one of the major public health problems" (New York Times obituary, January 10, 1979).

II (only); rubbed. Very good.

MRM1130 \$ 25

"Alan Mason Chesney was born in Baltimore in 1888. He received his A.B. in 1908 from the Johns Hopkins University and his M.D. in 1912 from the Johns Hopkins University School of Medicine. After serving in the Medical Corps of the U. S. Army during World War I and working as head of the infectious disease division of the department of medicine at Washington University in St. Louis, Chesney returned to Johns Hopkins in 1921 to direct the newly formed syphilis division. His studies in syphilis have influenced all subsequent studies in the area. He became dean of the school of medicine in 1929, serving for twenty-four years. While dean, he began working on a three-volume history, *The Johns Hopkins Hospital and the Johns Hopkins University School of Medicine: a Chronicle*. Chesney located many early records of the hospital and the medical school while conducting research for this book and initiated

efforts to establish archives for the medical institutions to preserve these records." – JHU.

56. **CHEYNE, John** (1777-1836). *A Case of Apoplexy, in which the Fleishy Part of the Heart was Converted into Fat. WITHIN: Medical Classics, Volume 3, No. 7, March 1939.* Baltimore: Williams & Wilkins, 1939. ¶ Thick 8vo. [2], 698-746 pp. Frontis. Wrappers, faded with edges roughened. Good. 59. **CLARK, Sir James** (1788-1870). *Observations on the System of Teaching Clinical Medicine in the University of Edinburgh; With Suggestions for its Improvement; Humbly Submitted to the Consideration of the Patrons and Professors of That Institution.* London: Thomas Davison, 1827. ¶ Small 8vo. viii, 30 pp. Modern marble paper with blue cloth spine. Text is unusually clean, with only occasional foxing. Author's inscription on title page, "To Dr. Brown with Dr. Clark's compliments". Fine.

MRM1134 \$ 60

The "Dr. Brown" of the inscription is most likely Dr. Joseph Brown, a surgeon and Major in the Grenadier Guards. He and Sir James served together on a committee that issued reforms for the military's medical corps and hospital practices (The Life of Florence Nightingale, Complete, 1913). The pamphlet is not priced, and the limited printing was circulated to "influence public opinion, and more particularly the opinion of public men whose judgment is to affect the vital interests of our

profession" (article published anonymously, Volume 27 of The Edinburgh Medical and Surgical Journal, 1827). Clark was personal physician to Queen Victoria and Prince Albert.

MRM1173 \$ 8
- Edited by Thaddeus J. Trenn (1937-2013) and Robert King Merton (1910-2003). Translated by Fred Bradley and Thaddeus Trenn. Foreword by Thomas S. Kuhn (1922-2017).
- "In September 1933 Fleck sent the manuscript of his book *Die Analyse einer wissenschaftlichen Tatsache* to Moritz Schlick. In March 1934, Schlick replied and expressed his willingness to recommend it for publication under the condition that a specialist on the history of medicine would also review it positively. In 1935, Benno Schwabe finally published the book *Entstehung und Entwicklung einer wissenschaftlichen Tatsache: Einführung in die Lehre vom Denkstil und Denkkollektiv* (The Genesis and Development of a Scientific Fact: An Introduction to the Theory of Thought Style and Thought Collective). It was accompanied by a Polish summary of the main theses of the book (1934) and two important papers: "Scientific Observation and Perception in General" (1935b) and "The Problem of Epistemology" (1936). In Poland the book was criticized by Izydora Dąmbska and Fleck answered her critique in (1938). Fleck's next Polish philosophical article (1939a) referred, among others, to a book by a psychiatrist and historian of medicine, Tadeusz Bilikiewicz. Bilikiewicz replied with a moderate critique of Fleck's epistemology. Fleck in turn wrote a paper "Rejoinder to the Comments of Tadeusz Bilikiewicz" (1939b) in which he stated strong anti-realistic theses." – Stanford *Encyclopedia of Philosophy*.
99. **FLEXNER, Abraham** (1866-1959). *Medical Education; A Comparative Study*. New York: Macmillan, 1925. ¶ 8vo. ix, [5], 334 pp. Index. Red blind- and gilt-stamped cloth, dust-jacket; jacket darkened, extremities torn. Inked gift inscription from Haven Emerson to Dr. E. Mae McCarroll. Jacket is good, book near fine.

MRM1182 \$ 100

An excellent translation of the classic poem on the origins of syphilis, and the word generally credited as first describing a communicable disease. Published on the 400th anniversary of the poem, the book offers a Latin and English-translation page-by-page presentation of the work. Emily Wilber Cave France Wright was a Greek classics Professor at Bryn Mawr College, and came to translate early classics of medicine literature late in her career.

PROVENANCE: Dr. Haven Emerson (1874-1957), Physician and public health official, was Health Commissioner of New York City. He was First Director of the Columbia University's DeLamar Institute of Public Health, now the Mailman School of Public Health, 1922-1940. His son, John Haven "Jack" Emerson (1906-1997), was famous for improvements on the iron lung machine. See: Charles Bolduan, "Haven Emerson-The Public Health Statesman," *American Journal of Public Health*, Jan. 1950. – Ernest Mae McCarroll (ca. 1898-1990) physician, was born in Birmingham, Alabama, on November 29, 1898. She worked on trying to eradicate venereal disease in Newark, New Jersey. She received her M.S. in public health from the College of Physicians of Columbia University in 1939 and completed her postgraduate studies at Harvard. In 1946 she became the first African-American appointee to the staff at Newark City Hospital. See: Joan N. Burstyn, *Past and Promise: Lives of New Jersey Women*, page 355. See also: CHAAMP Resources (A scholarly collection of resources on the rich history of African Americans in the medical professions).

108. **FRANK, Johann Peter** (1745-1821). *A System of Complete Medical Police; Selections from Johann Peter Frank*. Baltimore: Johns Hopkins, 1976. ¶ 8vo. xxiii, [1], 469, [1] pp. Minor marginalia. Dr. Galdston actively practiced psychiatry until a few weeks before his death, at ninety-four. "Dr. Galdston, who was born in Kishinev, Russia, received his medical training at Fordham University and his psychiatric training at the Wagner Jauregg Institute in Vienna in the early 1920's. He was a staff physician at the Union Health Center and the education secretary of the New York Tuberculosis Association before joining the New York Medical Academy in 1928. For the next 34 years, he served as spokesman for the academy and sponsored activities to bring information on medical subjects to the public. He retired from the academy in 1962 and was director of resident training for Connecticut's Department of Mental Health. He also was president of the American Association of Directors of Psychiatric Residency Training." (New York Times obituary, December 20, 1989).

114. **GALDSTON, Iago** (1895-1989). *On the Utility of Medical History; Monograph 1*. New York: International Universities Press, 1957. ¶ 8vo. ix, [1], 73, [12] (ads) pp. Blue gilt-stamped cloth, printed dust-jacket; jacket extremities worn. Very good. MRM1189 \$ 5

"This volume is the first of a new series of monographs published by the Institute on Social and Historical Medicine. The purpose of this organization is "to inquire whether medical history can in effect serve to illuminate current problems and issues in medicine. Can they, when seen in the perspective of historical data and historical derivations, be better understood? Can the knowledge of past experiences, historically comprehended, sharpen judgment as to the values and the probable effectiveness of proposed actions?" The book could well have been subtitled, *Apologia pro historia medicinae*. Many pages are devoted to justify the serious study of medical history in the face of a widespread apathy on the part of the medical profession." (JAMA review, August 2, 1958).

115. **GALE, Ernest F.** (1914-2005). *The Chemical Activities of Bacteria*. London: Univ. Tutorial Press, 1951. ¶ Small 8vo. [vi], 213, [1] pp. Frontis., illus., tables. Blue gilt-stamped cloth; heavy marginalia & underlining, some in red and blue ink. Good (noting marginalia). MRM1190 \$ 5

Inscribed with the Authors' Compliments

122. **GOODSIR, John** (1814-1867); **Henry Duncan Spens ("Harry") GOODSIR** (1819-c.1848). *Anatomical and Pathological Observations*. Edinburgh: Myles Macphail, 1845. ¶ Small 8vo. [4], iv, 127, [1] pp. 9 plates. Modern rebound two-tone red and grey library boards; author and title handwritten on cover. Some pages and plates partially uncut. INSCRIPTION BY BROTHERS JOHN & HARRY GOODSIR, THE YEAR OF HARRY'S SAILING ON THE ILL-FATED FRANKLIN EXPEDITION TO FIND THE NORTHWEST PASSAGE: Inscribed "Newport Esq.- with the authors' complts." Rubber stamps: "Property of the Medical Society City and County of Denver", and "Surgeon General's Library". Good. RARE. MRM1197 \$ 1,250

"John Goodsir's paper on "Centres of nutrition" anticipates to a certain extent the cell doctrine afterwards developed by Virchow (see No. 2299). Virchow dedicated the first edition of his *Cellularpathologie* to Goodsir. Goodsir's paper on the bone-forming properties of certain corpuscles found within osseous tissue represent the foundation of the study of osteogenesis, as distinct from descriptive osteology." – Garrison and Morton 2294.1.

John Goodsir was a renowned Scottish physician. "Human anatomy, pathology and morphology formed his chief study. In 1840 he moved to Edinburgh, where in the following year he was appointed conservator of the museum of the College of Surgeons, in succession to William MacGillivray. Much of his reputation rested on his knowledge of the anatomy of tissues. In his lectures in the theatre of the college in 1842-

1843 he evidenced the largeness of his observation of cell-life, both physiologically and pathologically, insisting on the importance of the cell as a centre of nutrition, and pointing out that the organism is subdivided into a number of departments. R. Virchow recognized his indebtedness to these discoveries by dedicating his Cellular Pathologie to Goodsir, as "one of the earliest and most acute observers of cell-life." - Encyclopedia Britannica.

Harry Goodsir was "one of the younger brothers of John Goodsir...Harry Goodsir qualified with the LRCS Edinburgh diploma in 1840, and was an anatomist and naturalist of the highest promise. He was Conservator of the Museum of the Royal College of Surgeons of Edinburgh from 1843 until 1845, when he was appointed assistant surgeon and naturalist to the Franklin Expedition. This sailed to the Arctic seas under Sir John Franklin, to find the North-West Passage, but was lost. Its fate was never determined satisfactorily, although several subsequent expeditions attempted to do so". - Journal of Medical Biography, Vol. 12, ISS. 2, 2004.

It seems very likely this is inscribed to George Newport, esq., F.R.C.S., F.L.S., President of the Entomological Society. Both Goodsir and Newport were members of the Royal Society.

Philadelphia: W. B. Saunders, 1897. ¶ Thick 8vo. [2], 968, [8] (ads) pp. 12 plates, 295 illus., index. Modern pale-rose gilt-stamped cloth. Very good +. EXTRA POSTAGE WILL APPLY.

MRM1198 \$ 125

First (and best) edition. A serious attempt to catalogue medical anomalies, but with an inadvertent "Ripley's" aspect to it all. The rampant cultural imperialism of the West comes through in most of the work. An excellent artifact of the state of medical knowledge at the start of the 20th century as well as an artifact of medicine and imperialism (see, for example, the section Hottentot Women). The illustrations in this edition are far better than any of the later printings/reprints.

Later blue gilt-stamped buckram; Hahnemann Medical College Library rubber stamp, library perforation on title page [+p.101], penciled underlining and marginalia throughout. Rubber-stamp of Charles Mohr, M.D., Philadelphia, PA [fl.1898] [stamps are found on title & p. 231]. Good.

MRM1200 \$ 60

Translated by Conrad Wesselhoeft (1834-1904). A seminal work on homeopathy. "Samuel Hahnemann, in full Christian Friedrich Samuel Hahnemann (born April 10, 1755, Meissen, Saxony [now in Germany]—died July 2, 1843, Paris, France), German physician, founder of the system of therapeutics known as homeopathy. Hahnemann studied medicine at Leipzig and Vienna, taking the degree of M.D. at Erlangen in 1779. After practicing in various places, he settled in Dresden in 1784 and then moved to Leipzig in 1789. In the following year, while translating William Cullen's *Lectures on the Materia medica* into German, he was struck by the fact that the symptoms produced by quinine on the healthy body were similar to those of the disordered states that quinine was used to cure. This observation led him to assert the theory that "likes are cured by likes," *similia similibus curantur*; i.e., diseases are cured (or should be treated) by those drugs that produce in healthy persons symptoms similar to the diseases. He promulgated his principle in a paper published in 1796; and, four years later, convinced

that drugs in small doses effectively exerted their curative powers, he advanced his doctrine of their "potentization of dynamization." His chief work, *Organon der rationellen Heilkunst* (1810; "Organon of Rational Medicine"), contains an exposition of his system, which he called Homöopathie, or homeopathy. His *Reine Arzneimittellehre*, 6 vol. (1811; "Pure Pharmacology"), detailed the symptoms produced by "proving" a large number of drugs—i.e., by systematically administering them to healthy subjects." – *Encyclopaedia Britannica*. Garrison and Morton 1966.

132. **HIRSHFIELD, Daniel Saul.** *The Lost Reform: The Campaign for Compulsory Health Insurance in the United States from 1932 to 1943.* Cambridge: Harvard University Press, 1970. ¶ 8vo. xi, [3], 221, [1] pp. Index. Gray silver-stamped cloth, dust-jacket; jacked spine faded, else near fine. ISBN: 674539176
MRM1209 \$ 12

Hirshfield's expanded dissertation remains oddly timely amidst the current healthcare debates. "One of the more important American reform movements during the thirties and one that was supported by members of the New Deal coalition was the futile struggle to enact federal legislation for compulsory health insurance. In this comprehensive historical account of the movement, the author outlines its strategy and tactics and traces the crucial episodes in its struggle. Daniel Hirshfield concludes that the nature of the movement, including its timing, tactics, leadership, and opponents, caused its failure—a failure which contrasts markedly with the success of other equally sweeping reforms." – HUP.

"Lester King always termed himself a self-made historian. By this, he meant simply that he had received no advanced degree in that subject. But, in his chosen area of specialization, the Eighteenth Century, his scholarship was widely accepted and, sometimes, seminal. His contributions were recognized in many ways, most notably in his long-term connection with the American Association for the History of Medicine. He was president of the Association in 1974 and 1975; delivered the prestigious Garrison Lecture in 1975; received the 1977 William H. Welch Medal for best book in the history of medicine; and was the first recipient of the Lifetime Achievement Award in 1988. In 1964, he received the Boerhaave Medal from the University of Leyden. King was also an active participant in the Chicago Medical Historical Society. He was a member of the Department of History, University of Chicago, through most of the 1970s and 1980s. King was Senior Editor of the Journal of the American Medical Association (JAMA) from 1963 until 1973 and Contributing Editor for many years after that. In the 1960s, a happy decision by John Talbott, then editor-in-chief of JAMA, made King the book review editor." - Charles G. MRM1231 \$ 125

First edition. Kolliker was on the cutting edge of applying histology to smooth muscle, striated muscle, skin, bone, teeth, blood vessels and viscera. His work broke open new understandings of anatomy, including

this one wherein he discovered the osteoclast, the specific cell responsible for bone resorption. "The year 1853 also saw the publication by Rudolph Virchow ... of the first description of the uncalcified matrix of bone or osteoid. Carl Gegenbaur in 1864 demonstrated that osteoblasts were present in both the periosteal layer and the endosteum. By 1873, the specific cell responsible for bone resorption, the osteoclast, had been identified and named by Rudolph A. Kolliker..." Peltier, *Fractures*, 1990, p. 219.

PROVENANCE: "Herbert McLean Evans [1882-1971] made a monumental contribution to the field of endocrinology through his studies of the physiology of reproduction. Many have remarked that the ultimate recognition of his achievements eluded him. Four of his lines of research and discovery were often mentioned as deserving of the Nobel Prize: (1) development of the vascular system, (2) elucidation of the estrous cycle in the rat, and the role of pituitary gonadotropin in reproduction, (3) discovery of growth hormone, and (4) discovery of and isolation of vitamin E. The first of these was entirely Evans' own work. The other three were collaborative efforts, but Evans' contribution to each was crucial" (A History of UCSF).

First edition. Edwards, French physiologist, born in Jamaica, the brother of Henri Milne-Edwards, studied under François Magendie, who was also a pioneer anthropologist. He has been called "the father of ethnology in France". He was elected to the Royal Society in 1829. Edwards was a vitalist who studied the effect of physical forces on processes in living organisms, "seeking to demonstrate how physical forces such as heat, light, and electricity modified living processes." The present work was translated into English in 1834, by Thomas Hodgkin. See: Jeffrey P. Baker, *The Machine in the Nursery: Incubator Technology and the Origins of Newborn Intensive Care*. Johns Hopkins University Press, 1996. (p. 16).

"After a short excursion into mineralogy, Edward devoted much time to the study of the influence of environmental factors on the 'animal economy.' His early results were honored by the Prix Montyon of the Académie des Sciences (1820), and in 1824 he published his finding in a book. His main idea as that vital processes depend on external physical and chemical forces but are not entirely controlled by them. Life is different from heat, light, or electricity, forces which, however, contribute to the production of vital phenomena. Edwards systematically examined all principal functions, mostly of vertebrate species; and by varying the external conditions, he determine the nature and degree of their modification. Among the phenomena studied were the minimum and maximum temperatures compatible with life; heat production in young

and adult animals; resistance of young animals to cold and to lack of oxygen; the importance of humidity, pressure, and movement of air in the loss of heat by transpiration; the role of light in the development of batrachians; and expiration of carbon dioxide by animals deprived of oxygen. Important was his finding that some warm-blooded animals ... are norm less developed and have a much smaller capacity for heat production than those not born helpless..." – DSB.

In 1822, Laennec became Chair of Medicine at the Collège de France, where Edwards carried out his research under the direction of his mentor, François Magendie (1783-1855). This may be the nexus explaining the lengthy presentation to Laennec. The work was quite popular when published. It was translated into English in 1824 by Thomas Hodgkin (1798-1866). "Edwards studied the influence of environmental factors on animal life, concluding that vital processes depend on external physical and chemical forces but are not entirely controlled by them. The work includes an account of Edwards' important experimental work regarding the effect of light on the body." – Garrison & Morton 145.56, 1991, 598. DSB, IV, pp. 285-6 [by Vladislav Kruta].

159. **LEIDY, Joseph** (1823-1891). *Valedictory Address to the Class of Medical Graduates of the University of Pennsylvania Delivered at the Public Commencement, March 27TH, 1858*. Philadelphia: Graduating Class (Collins, Printer, 705 Lodge Alley), 1858. ¶ Small 8vo. 32 pp. Disbound. Inked signature on title-page, "Respects of F. B. Dick". Generally very good with very slight occasional foxing.

MRM1237 \$ 25

Leidy was a professor of Anatomy at the University of Pennsylvania. "The following year, 1845, he became involved with the dissection and drawing of snails for a book on North American mollusks written by Amos Binney and edited by Augustus A. Gould. The 1851 publication of this book brought Leidy immediate recognition, along with membership in Boston Society of Natural History and Philadelphia's Academy of Natural Sciences. The Academy appointed Leidy as its librarian in 1845 and then as its curator in 1846, a position he would hold for the rest of his life. Just three years after earning his M.D. Leidy entirely abandoned his medical practice to devote his professional life to the study of living organisms.

Brilliant Scholarship

160. **LESKY, Erna** (1911-1986). *The Vienna Medical School of the 19th Century*. Baltimore: Johns Hopkins University Press, 1976. ¶ 8vo. xv, [1], 604 pp. 100 plates, indices. Blue gilt-stamped cloth, dust-jacket; jacket extremities lightly worn. Inked ownership name, Maulitz. Very good. ISBN: 0801819083

MRM1238 \$ 75

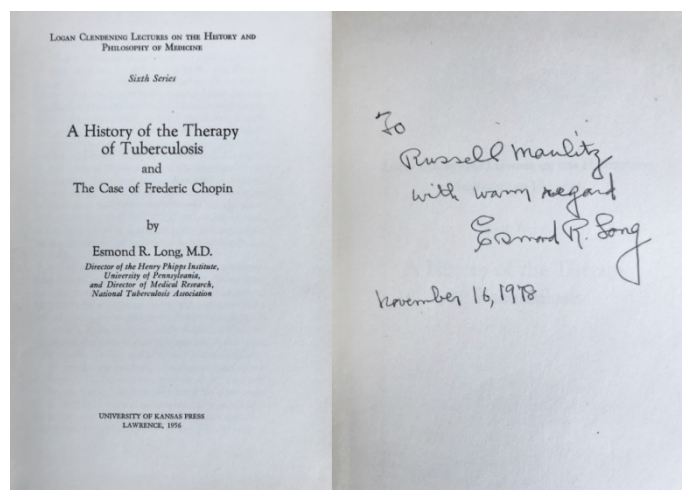

"The book, encyclopedic in scope, has many excellent features—and many drawbacks. Based on archival sources as well as published works, the amount of detail is truly enormous. After a short introduction, the course of events is described in three sections, chronologically more or less distinct. Within each of these periods, the exposition attends to individual specialties, eg, internal medicine, surgery, obstetrics. In the last and longest section, more than 20 specialties are described. This presentation of information in mosaic form is fine for those who want specific details about specific individuals or events.

Moreover, the references and bibliographies comprise an admirable storehouse of information; the old photographs are splendid." - Review by King, JAMA, Volume 238, September 1977, pp. 1184-1185.

168. **LOUIS, Pierre-Charles-Alexandre** (1787-1872). *Recherches Anatomico-Pathologiques sur la Phthisie; Précédées du rapport fait à l'Académie Royale de médecine par MM. Bourdois, Royer-Collard et Chomel*. Paris: Gabon, 1825. ¶ Thick 8vo. xxiv, 16, 560 pp. Half title (as a fragment); foxed and/or browned, cellophane tape applied to gutter pp. 544-545 (index section). Modern maroon half-cloth with marbled boards, paper spine label. Untrimmed, as issued. Very good. MRM1245 \$ 100

First edition. "Louis' researches were based on 358 dissections and 1,960 clinical cases, and included a numerical study of extra-pulmonary lesions. First edition in English, London, 1835. English translation, Boston, 1836. A translation of the 2nd edition was published by the Sydenham Society in 1844." - Garrison and Morton 3221.

"One of the most influential figures in French medicine, Louis received his medical degree from the University of Paris in 1813. He practiced medicine for seventeen years in Russia but left to undertake further study after becoming distressed over the ineffectiveness of local measures taken to deal with a diphtheria epidemic. Returning to Paris, he embarked on the life-long study of the fatal diseases with particular emphasis on tuberculosis and typhoid fever. Working with a large number of patients, Louis collected detailed

statistics on every case using the results as instruments of diagnosis and therapy. His reliance on the statistical analysis of disease, though sometimes faulty, helped put to rest the concept of a priori theories of medicine so pervasive at the time. This work on tuberculosis, which established Louis' reputation as a clinician, gives a numerical study of extrapulmonary lesions based on 358 dissections and 1,960 clinical cases." – *Heirs*.

"Louis was one of the greatest of the French clinician-pathologists of the early nineteenth century. He had a remarkable capacity for precise unbiased observations and for clear and beautifully written descriptions. Louis confined his observations to tuberculosis, and it seems to us that he gave a clear over-all picture of the disease hardly surpassed by Laennec. The book is in two parts. The first part deals systematically with the lesions, illustrated by careful autopsy reports, many of which might well have come from a modern department of pathology. In the second part the clinical features are admirably detailed. The various stages of the disease - early, late, etc. - are discussed, as well as the symptoms of involvement of organs other than the lung . As with Laennec, any serious student of tuberculosis must carefully study Louis's book; one cannot do justice to it in a few words." - Bloomfield, *Communicable Diseases*, p. 201.

"The arbitrary doctrines of Broussais were overthrown by P.C.A. Louis, the founder of medical statistics. Louis thought that the fallacies of an a priori theory, like that of Broussais, can easily be brought out and thrown into relief by good statistics and that statistics can sometimes be used as an instrument of precision in cases where proper experimental methods are wanting. To establish his own results, Louis made over 5000 postmortems investigations. He was the first, after Floyer, to use the watch in timing the pulse. Through his American pupils, Holmes, Gerhard, the Jacksons, the Shattucks and others, he exerted a powerful influence upon the advancement of medical science in the Eastern United States. The strong stand which Louis took in favor of facts and figures, as against the sterile theorizing of the past, appealed especially to the keen, practical common sense of these northern physicians". – Garrison, *History of Medicine*, pp. 410-411.

☼ Garrison and Morton 3221; *Heirs of Hippocrates* 1438; Osler, *Alabama Student*, p. 194; Waller 6034 (2nd ed., 1843); Wellcome III, p. 551.

172. **MAGENDIE, François** (1783-1855). *Précis Élémentaire de Physiologie. [Tome second]. Troisième édition*. Paris: Mequignon-Marvis Père Et Fils, 1833. ¶ 8vo. [4], 628 pp. Fold-out plate in rear [Circulation du sang dans la queue du têtard" – Blood circulation in a tadpole tail -], index. Original quarter morocco marbled boards; wear to extremities, spine and hinge repaired. Light foxing. Ink signature on title page, Thomas Hun; bookplate of Thomas Hun. Good condition. MRM1251 \$ 65

Third edition of the second volume. Rear fold-out plate is quite clean. Magendie's legacy is one of cruelty regarding his strident defense of live vivisection as a teaching tool. He may be the only individual condemned for his actions by Charles Darwin, Aldous Huxley, and Albert Einstein. "The first modern physiology textbook, in which doctrine gave way to simple, precise descriptions of experimental facts. Vol. 2 contains Magendie's classic demonstration of the importance of nitrogenous food, or protein, in the food supply of mammals. In the course of his experiments on dogs fed non-nitrogenous substances, Magendie also induced the first experimental cases of an avitaminosis (specifically, lack of vitamin A)." – Garrison and Morton.

PROVENANCE: Dr. Thomas Hun (1808-1896) "began his medical studies with Dr. Platt Williams, and in 1827 entered the University of Pennsylvania and received his degree of medicine in 1830. On the outbreak of cholera early in the summer of 1832, the first appearance of this disease in Albany, a cholera hospital was organized and Dr. Hun served as one of the attending physicians. He continued in this position

until the disappearance of the cholera and the closing of the hospital in the autumn of that year. From 1833 to 1839 he studied medicine in Europe, and remained during that time almost exclusively in Paris. When the Albany Medical College was organized in 1839 he delivered the opening address for the first course of lectures and was made professor of the institutes of medicine, a chair which he held until 1858." (Jesse Montgomery Mosher, *American Medical Biographies*, 1920).

Black gilt-stamped cloth, dust-jacket; jacket edges lightly worn. Inked ownership name, Russell C. Maulitz. Very good. ISBN: 0521227429

MRM1256 \$ 55

"This is the first comprehensive history of the German university system in the eighteen and nineteenth centuries to be published since 1902." "It examines the evolution of the universities from their moribund state in 1700 to their rise to the pinnacle of world prestige and scientific leadership in 1914. In contrast to traditional university histories published in Germany, Professor McClelland's book surveys the entire university system. It explores the influence of political, social and economic forces that helped to shape the growth, reform and scholarly excellence of the late nineteenth-century 'research university'. It thus uncovers the motivating forces behind the change of the system of higher education to meet the needs of the expanding German society. The book will be of interest to historians of education and particularly to the many historians of modern Germany." – CUP. Issued in cloth and in paperback, this is the first edition in cloth.

CONTENTS: A Sociological Approach to the History of Medicine (Thomas Mckeown); A Historical Appraisal of the Medical Task (Thomas Mckeown); Historical trends and Future Prospects in Public Health (George Rosen); Evolution of Medical Practice (John Brotherston); Historical Discontinuity, Hospitals and Health Services (Paul J. Sanazaro); The influence of Medical technology on Medical Services (Bernard Towers); On Measuring Economic Benefits of Health Programs (Rashi Fein); A Contemporary View of the Historical Influences on Medicine (Henry Miller).

181. **MILLER, Genevieve** (1936-2014). *The Adoption of Inoculation for Smallpox in England and France*. Philadelphia: University of Pennsylvania Press, 1957. ¶ 8vo. 355, [1] pp. 14 figures, index. Blue gilt-stamped cloth, dust-jacket; jacket with short tears. Very good. Scarce.

MRM1262 \$ 100

"The appendices contain the early histories of inoculation and a list of German doctoral dissertations on inoculation, 1720-52. There is also an excellent bibliography." – Garrison and Morton 5436.1. The author took her M.A. degree from Johns Hopkins, and a Ph.D. from Cornell. She later taught the history of medicine at Hopkins, of the history of science at Cornell, and then taught medial history at Case Western. " Genevieve Miller surmounted two disciplinary challenges over the course of a long, accomplished career. Miller first strayed into medical history in the 1940s, a time when physicians still dominated that field and historians were seen as interlopers at best, or incompetents at worst. Despite this circumstance, she pursued graduate studies in medical history, becoming one of the first women to earn a PhD in this field. Her dissertation, published as *The Adoption of Inoculation for Smallpox in England and France* (1957), won immediate acclaim and is still considered a classic work in the history of medicine. Miller's second challenge lay in a career shift to the domain of medical museology. She became the first nonphysician director of the Dittrick Museum of Medical History, at Case Western Reserve University (CWRU) in 1967, bringing to that endeavor training in museology and a commitment to public history. Miller's career thus comprised a distinctive blend of academic attainment and respected museum curation." – In Memoriam, Genevieve Miller

184. **MITSCHERLICH, Alexander** (1908-1982). *Doctors of Infamy; The Story of the Nazi Medical Crimes*. New York: Henry Schuman, 1949. ¶ 8vo. xxxix, [3], 172 pp. 16 photographs, index. Gray black-stamped cloth, dust-jacket; jacket worn. Very good.

MRM1263 \$ 33

The rare dust-jacket suggests a more-sensationalist text than is found. Introduction by Andrew Conway Ivy (1893-1978); translated by Heinz Norden (1905-1978). Albert Deutsch (1905-1965) contributes an essay on medical ethics. A straightforward narrative on the principle principal war crimes trials of notorious Nazi physicians and medical researchers who used concentration camp inmates and prisoners-of-war for experimentation. At the end of the Second World War evidence of criminal and murderous behavior by Nazi physicians and scientists was presented at the Nuremberg trials. A key defense strategy employed by accused Nazis was that "they could not have violated standards for the ethical conduct of research, since no such standards existed." The international jurists presiding over the trials then urged that specific ethical codes of conduct be created for scientific research. The result was the Nuremberg Codes, which attempted to present a broad set of carefully articulated universal rules to guide research. Ethical research went from being an independent free-for-all to a top-down paradigm of mandated behavior. The Codes represented the first steps toward current concepts of informed consent. - Simmerling, M., Schwegler, B., Sieber, J.

- E., & Lindgren, J. "Introducing a new paradigm for ethical research in the social, behavioral, and biomedical sciences: part I." *Northwestern University Law Review*, 10(2), 837-859), 2007. The photographs include autopsy results, and images of prisoners being subjected to high altitude experiments that caused their deaths. The rare dust-jacket suggests a more-sensationalist text than is found.

203. **[PARE, Ambroise** (1510-1590)] **HAMBY, Wallace Bernard** (1903-1999) (editor). *The Case Reports and Autopsy Records of Ambroise Paré*. Springfield: Charles C. Thomas, 1960. ¶ 8vo. xx, 214 pp. Frontis., index. Beige brown-stamped cloth, dust-jacket. Very good. MRM1284 \$ 30

Translated from Joseph François Malgaigne's (1806-1865) Œuvres complètes d'Ambroise Paré, published in 1840-1841. Note the dust-jacket and title-page refer to the author as "J. P. Malgaigne" rather than "J. F. Malgaigne". WorldCat, identifies Malgaigne as Joseph François, or "J.F." A curious, if relatively inoffensive, error. Wallace Bernard Hamby: "His chief contributions to the development of neurosurgery consist of improvements in diagnosis and techniques, working through minimal exposures. He has a special interest in the development of diagnosis and surgical treatment of intracranial vascular lesions, and published the earliest complete monograph on the subject of intracranial aneurysms. - Obituary, Society of Neurological Surgeons (web-source).

Translated by Achilles Rose (1839-1916). PROVENANCE: Ernest Ward Willetts (1897-1965) was a Fellow of the American College of Physicians, and a member of the American Society of Clinical Pathologists, American Medical Association, Association of American Bacteriologists, and Vice-president of the Medical Society for the State of Pennsylvania. At one point in his career he also served as the President of the Allegheny County Medical Society and as the President of the Pittsburgh Academy

of Medicine. He was also the author of several medical related studies that were academically recognized during his career. Ernest wrote papers on tetanus, bacteria of rheumatic fever, and the Swift-Ellis treatment of cerebrospinal syphilis.

"Philibert Joseph Roux (1780-1854), a French surgeon, was a student and friend of Marie Xavier François Bichat, the father of modern pathology and histology. He was assigned as a surgeon to the Hôpital Beaujon (1806), the Hôpital de la Charité (1810) and to Hôtel-Dieu de Paris (1835), where he succeeded to Guillaume Dupuyrten, a French anatomist, as a Chief Surgeon. Roux is best known for having

performed the surgical repair of a cleft palate and for having been the first surgeon to stitch a ruptured female perineum. His contribution to surgery has also included the publication of *Quarante années de pratique chirurgicale*. Roux was awarded the grade of Chevalier of the National Order of the Legion of Honor and that of Officer. He also served as a President of the Academy of Sciences. He died of a stroke on 3 March 1854." – U.S. National Library of Medicine. Garrison, *History of Medicine*, p. 490; Castiglioni p. 715.

MRM1323 \$ 100

First edition in English. "The cell theory and the germ theory of disease were two of the most important scientific discoveries in the nineteenth century. The cell theory was a keystone of modern biology and, with its advent, the biological sciences began a period of rapid ascendancy. Schwann began his university education at Bonn in 1829 where he was influenced by Müller (see No. 1631 ff.) and later turned to medicine. He studied at Würzburg and Berlin where he received the M.D. degree in 1834. After graduation, he was appointed assistant in the Anatomical Museum and was able to work closely with Müller in a challenging and stimulating intellectual atmosphere. It was during this period that he made his most important studies and discoveries. In 1839 he accepted the chair of anatomy at Louvain and in 1848 moved to a similar position at Liège where he taught until his retirement in 1880. In Berlin, Schwann was in frequent contact with Matthias Jacob Schleiden (1804-1881) who had abandoned law for medicine, later becoming professor of botany at Jena. In 1838 Schleiden published a paper in which he showed

that plants consist of cells which were capable of independent development and yet were an integral part of the total organism. A year later Schwann published his *Mikroskopische Untersuchungen über die Uebereinstimmung in der Struktur und dem Wachsthum der Thiere und Planzen* in which he reported on his observations that plant and animal tissues were composed of cells and that the cells of each tissue had their own characteristic appearance. Schwann and Schleiden are considered to be co-discoverers of what is sometimes called the Schleiden-Schwann cell theory. Although they are given credit for the discovery, it is recognized that many other investigators also contributed to this great scientific achievement. Schwann made a number of other important contributions to science in addition to the cell theory. He demonstrated that oxygen was necessary for embryonic development and that putrefaction was caused by living organisms which could be destroyed by heat. He showed that the upper esophagus contains striped muscle and described the sheath of the axis cylinder of nerves. He reported on the organic nature of yeast and the production of alcohol by fermentation. It was while investigating the process of digestion that he discovered pepsin in the stomach and later the role that bile plays in digestion. The present work was translated by Henry Smith (1823-1894) for the Sydenham Society. Smith, surgeon to the Royal General Dispensary in London, remarks in the Translator's Preface that "the first physiologists of our day have judged the discoveries which it unfolds as worthy to be ranked amongst the most important steps by which the science of physiology has ever been advanced." Schleiden's "*Contributions to phytogenesis*," translated by Smith, is also included in the book so the reader may have ready access to the work, since it is referred to frequently by Schwann." - Heirs of Hippocrates 1754.

PROVENANCE: John Maund (1823-1858), physician and analytical chemist, was born on 12 March ... Maund was admitted to the University of Melbourne (M.D., ad eund., 1857) ... "He was not married and the sister who had cared for him returned to England. His house was sold to Edward Barker and his practice taken over by J. G. Beaney."; Edward Barker (1816-1885), surgeon and pastoralist, and William Barker (1818-1899), pastoralist and medical practitioner, were born at Aylesbury, Buckinghamshire, England, sons of John Barker (1789-1833), gentleman, and his wife Mary Anne, née Elridge (1790-1872); Sir Harry Brookes Allen was Dean of the Medical Faculty at the University of Melbourne 1886-1889 and 1897-1924; Gordon Roy Cameron FRCP FRCPATH FRS (1899-1966), Australian pathologist, authored *Pathology of the Cell*, (1952). Cushing S161; Garrison and Morton 113 (German ed., 1839); Heirs of Hippocrates 1754.

MRM1357 \$ 17

A history of influenza in Great Britain, including the writings of various authors concerning different epidemics in Great Britain during the 16th-19th centuries. Hope-Simpson states that Thompson "performed an invaluable service" in compiling this anthology of influenza. The author reasoned that this epidemic performed differently than others, including smallpox, typhus, cholera, sweating-sickness, etc. He considers diet, climatic factors, hygienic condition, societal policy or public health angles, and geography. Garrison and Morton 5489. See: R.E. Hope-Simpson, *The Transmission of Epidemic Influenza*.

276. **THOMSON, John** (1765-1846). *Lectures on Inflammation; Exhibiting a View of the General Doctrines, Pathological and Practical, of Medical Surgery*. Philadelphia: Carey & Lea, 1831. ¶ Thick 8vo. viii, 526 pp. Modern red cloth, gilt-stamped paper spine label. Foxing throughout; top

corner of original text-block gnawed, diminishing the paper size (not affecting printed text). Binding is fine with book in good condition; overall: good.

MRM1358 \$ 45

Second American edition. "Carpue more than once acknowledged his indebtedness to John Thomson's Lectures on inflammation (Edinburgh, 1813), not only for his physiological reasoning but also for the historical treatment of the repair of mutilated parts, to which Thomson devoted almost twenty pages in discussing Tagliacozzi ["Taliacotius"] and the literature of the subject." - Gnudi & Webster, *Gaspere Tagliacozzi*, p. 316n.

277. **TREVES, Sir Frederick** (1853-1923). *The Elephant Man and Other Reminiscences*. New York: Henry Holt, 1924. ¶ First American edition (printed with British sheets). 8vo. [6], 222 pp. Burgundy blind- and gilt-stamped cloth. Lightly foxed. Very good.

MRM1359 \$ 35

278. **TROUSSEAU, Armand** (1801-1867). *Clinique Médicale de L'Hôtel-Dieu de Paris. Deuxième Edition, Revue et Augmentée. [2 (of 3) volumes]*. Paris: J.-B. Baillière et Fils, 1865. ¶ Volumes I & II (of III). 8vo. lii, 812; [iv], 737, [3] pp. Early gilt-stamped brown half-calf, mauve pebbled cloth; spine replaced with kozo, preserving remnants of spines (vol. II spine flipped-over). Some foxing but many pages are clean and crisp. ASSOCIATION COPY WITH PRESENTATION FROM SIR JOHN STRUTHERS TO SIR JAMES YOUNG SIMPSON - FORMERLY OWNED BY JOHN RODMAN PAUL. Bookplate of John Rodman Paul. Inked inscription [c.1865-6] on front paper, "To Dr. Simpson from Dr. Struthers, with kind regards". Good plus.

MRM1360 \$ 75

Second edition, revised and enlarged (first issued in 1861). "Trousseau, great clinician of the Hôtel-Dieu, made important advances in the treatment of diphtheria, typhoid, scarlet fever and other conditions. In

his book he emphasized the value of bedside observation. He supported the doctrine of the specific nature of disease and realized the significance of Pasteur's work on fermentation. English translation, 1868-72." - Garrison and Morton - 2221.

"... Trousseau described the phenomenon in tetany which now bears his name. This is produced by pressure upon the arm sufficient to stop the circulation; the result is a sudden contraction of the fingers and hand into the so-called 'obstetrical position'." - Garrison and Morton - 4830.

"As professor of clinical medicine and physician to the Hôtel Dieu, Trousseau developed a well-deserved reputation as an exceptional lecturer and teacher and an advocate of bedside teaching through clinical demonstration. Clinique médicale contains the bulk of his most important writings and passed through two editions in Trousseau's lifetime and was printed in an eleventh French edition in 1913." - Heirs of Hippocrates 1635.

PROVENANCE: JOHN RODMAN PAUL (1893-1971), studied at Princeton and took his medical degree from Johns Hopkins, became a noted virologist specializing in the study of Poliomyelitis, and its epidemiology. He was an influential member of the Polio Advisory Committee of the U.S. Public Health Service. He is a member of the Polio Hall of Fame. SIR JOHN STRUTHERS (1823-1899), Professor of Anatomy at Aberdeen, is most recognized for his work on the "vestigial ligament of Struthers" which Darwin referred to in his *Descent of Man* to argue a common ancestor of man and other primates. SIR JAMES YOUNG SIMPSON (1811-1870) was an obstetrician and an early and influential proponent of the use of chloroform. The first edition of 1861 was issued in 2 volumes. This second edition was expanded into three volumes, the third part [836 pp.] of which is not with this copy of the set.

Original dark brown blind -and gilt-stamped pebbled cloth; extensively repaired spine (kozo). Pages quite clean. Good working copy.

MRM1365 \$ 100

Translated by Franklin Chance (1826-1897). Author's first and second prefaces dated, respectively, 1858 and 1859. Translator's Preface dated August 1860. "Virchow's greatest accomplishment was his observation that a whole organism does not get sick—only certain cells or groups of cells. In 1855, at the age of 34, he published his now famous aphorism "omnis cellula e cellula" ("every cell stems from another cell"). With this approach Virchow launched the field of cellular pathology. He stated that all diseases involve changes in normal cells, that is, all pathology ultimately is cellular pathology. This insight led to major progress in the practice of medicine. It meant that disease entities could be defined much more sharply. Diseases could be characterized not merely by a group of clinical symptoms but by typical anatomic changes. Pathologic anatomy, in addition to its great scientific merit, had tremendous practical consequences. If the physician was able to find out what

anatomic changes had occurred in a patient, he could make a much more accurate diagnosis of the disease than he could in the past. This also empowered physicians to give more precise treatment and prognosis. In many of his speeches Virchow stated that the practice of medicine in Germany should shift away from being a largely theoretical activity. He advocated for the study of microscopic pathological anatomy, for research to be performed by physicians, the importance of making systematic clinical observations, and the performance of animal experimentations" - Schultz, *Emerging Infectious Diseases*, vol. 14, No. 9, 2008. p. 1480.

Franklin Chance was a physician and Hebrew scholar, perhaps best known for mailing Charles Darwin (c. 1871) a letter with locks of his beard and his scalp hair as a refutation of Darwin's theories in the *Descent of Man*. Chance set "himself up as an exception to Darwin's statement: 'when in man the beard differs in colour from the hair of the head, as is often the case, it is, I believe, invariably of a lighter tint, being often reddish'. Chance's beard was darker than his scalp hair and he enclosed these samples to prove it. He also included a meticulous self-description of his body hair and ideas about how he might have inherited it from the maternal and paternal sides of his family. Darwin annotated the letter with a summary and incorporated Chance's observation into the second edition of *Descent* as a rare exception to the rule" (University of Cambridge Digital Library, MS-DAR 142:59-60).
