*primarily a mathematical treatise - Mr. Cole was certainly a very learned purser. I tried to understand something of his work but my head hurt after page two.  It was intended that the book should have contained more material on navigation, but Cole got a bit too carried away with stereogoniometry, as it is so easy to do, and this left little time left for his navigational work; also he felt that naval officers would have little opportunity to practice his theories due to the "present threatening attitude of our enemies".  However the final two chapters contain his method of determining the direction and rate of leeway drift, using the doctrine of the composition and resolution of forces (oops, head's starting to hurt again), and a short note on working out the magnetic variation of a compass.  [I am pleased to note that I am not alone in being baffled by Mr. Cole's theories, the 1812 Gentleman's Magazine review of books, can only report that "This is doubtless a very useful (though to us, we confess, it is an occult) science...": and not being able to write any sort of coherent review, merely reprints the author's preface]*

£275

*a re-issue of the 1820 edition. In fact the title-page is misleading, as the full-title of the original printing reflects a much wider study of the canals and navigable rivers of the Department du Nord in northern France. Also, although the title-page indicates that this is volume one, I think that the work is complete and that the plates were sometimes bound up separately. The author was Divisional Inspector of the department’s bridges and embankments.*

Hammick held the post of Surgeon Extraordinary to the King, but had for many years been the First Surgeon of the Royal Naval Hospital at Plymouth, and this text is very much based on his practical work treating the injuries of naval officers and seamen. With its graphic descriptions of the practicalities of performing amputations and setting fractures both at sea and on land, it is easy to imagine that possibly this very text would have provided the detailed background information for Patrick O’Brian that he used so effectively to describe the work of Stephen Maturin. Likewise Hammick’s work on strictures of the urethra is based on his practical treatment of seamen suffering from the condition, a condition which seemed to be common in the navy at this period, caused in the author’s opinion by sleeping in wet beds and wearing damp clothes, enduring changes of climate, etc., and when allowed ashore “....indulging for several successive nights in the most licentious communication with them [women]...”

a marvellously detailed guide covering every conceivable aspect of preparing a Georgian navy sailing man-of-war for sea, with instructions for everything from anchors to yards, including the stepping of masts, securing yards, bending on sails, instructions for rigging, hoisting in guns, etc., etc. The original title was to be "The Seaman's Guide for Preparing Ships for Sea" (and this is the title that heads the pages) but at the last minute the author decided that as the work was intended for the use of junior officers, "The Naval Officer's Guide...." was more appropriate. Although Martelli had advanced to the rank of Mate (on HMS Donegal) when he wrote his guide, and later attained the rank of Lieutenant, he had 'enjoyed' plenty of time as a Midshipman to thoroughly learn the 'ropes', serving in this lowly rank for twenty years, and, yes, the bitterness is quite obvious! if these payments were being made to relatives of seamen who perished in the sinking of the 'Royal George' in the Solent in 1782, it seems an awfully long delay; but maybe that is how the wheels of the Treasurer of the Navy creaked along in those days. they may of course refer to sailors serving on the subsequent first rate ship of the line of the name, launched in 1788 and still in active service in 1795; in which case they may have been lost in the Glorious First of June action of the previous year.

A jolly poem about a fisherwife called Kate (later Crazy Kate), whose husband Ned “a big brown fisher-lad” went off to the fishing with half a score of other boats (ten to the non-poetic), and......never returned. When tragic Kate heard the news, she refused to believe that Ned was drowned and of course “she went slowly and surely mad”. Every day Crazy Kate would watch for her husband’s return, until some twenty years later she heard his cry from the sea and rowed out into the boiling surf, returning with his dead body, which amazingly enough looked just like the Ned of twenty years before. The shock of course killed poor Kate. The twist to the story was that nasty Ned hadn’t been drowned at all. Whilst all his fellow fishermen perished, Ned was rescued by a passing French ship, taken ashore, cruelly seduced by a fair, young French maid, who bore him a son, and, yes, it was the son that Crazy Kate brought ashore from the foaming briny. A sad tale indeed; but the good news is that this poetic record of the event is in sparkling condition.
