Rue des Canettes prez de St. Sulpice Avec Privilege du Roy pur 20. ans 1700':** Altkolorierter Kupferstich v. Guillaume De L'Isle in Paris, dat. 1700, 48 x 61 cm
€ 6.500,—
- Burden, The Mapping of North America, 761, state 2. second state, with correctly located mouth of the Mississippi River, but still with Rue de Canettes imprint and the date 1700. - Rare first state of the De L'Isle's highly important map of North America. - The first state of De L'Isle's map of North America is a widely celebrated cartographic landmark. - Most notably, De L'Isle's map is the first map to revert to the treatment of California as a peninsula, based upon reports received from Fra. Eusebio Kino. - Tooley referred to the map as "a foundation map...and the first to revert to a peninsular form of California" (Tooley, "French Mapping of the Americas" in The Mapping of America, p. 19). - Because of De L'Isle's access to the information from French explorers in the New World at a time when the French dominated the explorations of the interior of the continent, De L'Isle's maps were invariably updated and innovative in their content. - While his first regional maps did not appear until 1703 (Carte du Mexique et de la Floride... and Carte du Canada ou de la Nouvelle France) and 1718 (Carte de la Louisiane et du cours de Mississipi....), this map represents De L'Isle's first work on America and was extremely influential on other maps of the period, both for what it includes and as a snapshot of the knowledge available to De L'Isle in the 3 years immediately prior to his issuing the regional maps.
- The example offered here is the historically referred to as the first state (cartouche with cartographer's title "Geographe" and address "Rue de Canettes"). An article in the Map Collector (Issue 26, pp. 2-6, March 1984) by Schwartz & Taliaferro described a copy in Austria of an earlier state in which the mouth of the Mississippi River is shown in Texas, rather than as on the present copy, in Louisiana slightly west of longitude 280°. - No further copies of the map in earlier state have surfaced, and Philip Burden has referred to the earliest state as virtually a proof.
- Guillaume De L'Isle (1675-1726) is probably the greatest figure in French cartography. Having learned geography from his father Claude, by age of eight or nine he could draw maps to demonstrate ancient history. - He studied mathematics and astronomy under J.D Cassini, where he received the grounding in scientific cartography, that is the hallmark of his work. - His first atlas was published in about 1700, in 1702 he was elected a member of the Academie Royale des Sciences, and in 1718 he became 'Premier Geographe du Roi'. - His maps of the newly explored parts of the world reflect the most up-to-date information available and did not contain fanciful detail in the absence of solid information. - The map in perfect condition!.

Fine dark impression of this early coast to coast map of the United States, issued just after the declaration of Independence for the Republic of Texas in 1836. -

This is the one of the first maps to name and show Texas in it's independent configuration. - Marvelous large format map of the United States. - The map includes a marvelous treatment of the Western Territories of the United States, including a massive Neu-Californien, large "Oregon" Territory, extending to the Rocky Mountains, and large Missouri Territory, pre-dating the appearance of Nebraska Territory, Kansas, etc. - Upper California is shown in great detail, immediately before the explorations of John Fremont would eliminate the cartographic myths of the two large salt lakes (Timanagos and Tegwayo) and the river systems connecting each to the Pacific Ocean. In fact, this map is one of the most remarkably clear and bold depictions of these two mythical lakes and rivers, showing side by side with a relatively accurate and modern depiction of the Upper Colorado River, which had been explored for many years by Spanish missionaries, offering a stark contrast of the semi-explored regions of the West and those which were still virtually unknown. - In Oregon Territory, the river systems reflect the explorations of Lewis & Clark, the Hudson Bay Company outposts, etc. - One of the best early coast to coast maps of the US to appear in a commercial atlas in the 1830s.
